Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

98	21.8	87.2	186134	9	AL591390	AL591390 Mouse DNA	Direct Submission	Submitted (04-APR-2002) Wellcome Trust Sanger Institute, Hinxton,
99	21.8	87.2	187788	14	AC138925	AC138925 Homo sapi		Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
100	21.8	87.2	191137	14	AC145064	AC145064 Pan trogl	COMMENT	humquy@sanger.ac.uk Clone requests: clonerequests@sanger.ac.uk
101	21.8	87.2	191196	14	AL441903	AL441903 Homo sapi		On Apr 7, 2002 this sequence version replaced gi:17127811.
102	21.8	87.2	191957	8	AC015845	AC015845 Homo sapi		During sequence assembly data is compared from overlapping clones.
103	21.8	87.2	194160	8	AC130472	AC130472 Homo sapi		Where differences are found these are annotated as variations
104	21.8	87.2	194164	14	AC146119	AC146119 Pan trogl		together with a note of the overlapping clone name. Note that the
105	21.8	87.2	195558	8	AC007448	AC007448 Homo sapi		variation annotation may not be found in the sequence submission
106	21.8	87.2	196954	8	AC008267	AC008267 Homo sapi		corresponding to the overlapping clone, as we submit sequences with
107	21.8	87.2	197683	9	AC118476	AC118476 Mus muscu		only a small overlap as described above.
108	21.8	87.2	200028	8	AC092680	AC092680 Homo sapi		This sequence was finished as follows unless otherwise noted: all
109	21.8	87.2	201020	8	AC022809	AC022809 Homo sapi		regions were either double-stranded or sequenced with an alternate
110	21.8	87.2	201709	14	AC145497	AC145497 Papio anu		chemistry or covered by high quality data (i.e., phred quality >=
111	21.8	87.2	207860	14	AP001907	AP001907 Homo sapi		30); an attempt was made to resolve all sequencing problems, such
112	21.8	87.2	209472	14	AC090759	AC090759 Homo sapi		as compressions and repeats; all regions were covered by at least
113	21.8	87.2	214019	14	AC064803	AC064803 Mus muscu		one plasmid subclone or more than one M13 subclone; and the
114	21.8	87.2	214331	14	AC145462	AC145462 Callithri		assembly was confirmed by restriction digest. The following

* NOTE: This record contains 63 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

Sequence Quality Assessment: This entry has been annotated with sequence quality estimates computed by the Phrap assembly program. All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp. Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.

Sequence Validation: This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) are not resolved in the fingerprint and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines.

 ----- Project Information
 Center project name: esd
 Center clone name: 288H14

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics
 Sequencing vector: plasmid; n/a; 100% of reads
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.990319
 Consensus quality: 162199 bases at least Q40
 Consensus quality: 162591 bases at least Q30
 Consensus quality: 162777 bases at least Q20
 Insert size: 149000; agarose-fp
 Insert size: 162873; sum-of-contigs
 Quality coverage: 10.65x in Q20 bases; agarose-fp
 Quality coverage: 9.74x in Q20 bases; sum-of-contigs

 * NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.
 * This sequence will be replaced
 * by the finished sequence as soon as it is available and
 * the accession number will be preserved.
 1 49711: contig of 49711 bp in length

-----

NOTICE: This sequence may not represent the entire insert of this
clone. It may be shorter because we only sequence overlapping
clone sections once, or longer because we provide a small overlap
between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate
chemistry, or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by sequence
from more than one subclone; and the assembly was confirmed by
restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren,
Department of Genetics, Washington University, St. Louis MO. For
additional information about the map position of this sequence, see
http://genome.wustl.edu

SOURCE INFORMATION:
The RPCI-43 BAC Library has been constructed by Chung-Li Shu. DNA
was isolated from white blood cells obtained from a male chimpanzee
(Pan troglodytes, 'Cint', Verkes #C0471; birthdate: 6-6-80). The
clone and detailed information can be obtained from RegGen
(http://www.reggen.com) or Pieter de Jong and co-workers at
http://www.bacpac.chori.org.

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

-----
Sequence Quality Assessment:
This entry has been annotated with sequence quality
estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than
1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the
GenBank flat file format but are available as part
of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted:
all regions were either double-stranded or sequenced with an
alternate chemistry or covered by high quality data (i.e., Phred
quality >= 30); an attempt was made to resolve all sequencing
problems, such as compressions and repeats; all regions were
covered by at least one plasmid subclone or more than one M13
subclone; and the assembly was confirmed by restriction digest.

```

Sequence Validation:

This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) are not resolved in the fingerprint and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines.

INFORMATION: <http://www.hgsc.bcm.tmc.edu/> or email

gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:

<http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

 ----- Project Information

 Center project name: clz
 Center clone name: 120N04

This sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics

Sequencing vector: plasmid; n/a; 100% of reads
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.990319
 Consensus quality: 186653 bases at least Q40
 Consensus quality: 186859 bases at least Q30
 Consensus quality: 187025 bases at least Q20
 Insert size: 154000; agarose-fp
 Insert size: 187130; sum-of-contigs
 Quality coverage: 11.97x in Q20 bases; agarose-fp
 Quality coverage: 9.85x in Q20 bases; sum-of-contigs

* NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.

* This sequence will be replaced
 * by the finished sequence as soon as it is available and
 * the accession number will be preserved.

* 1 5374: contig of 5374 bp in length
 * 5375 5474: gap of unknown length
 * 5475 57679: contig of 5205 bp in length
 * 57680 57779: gap of unknown length
 * 57780 99879: contig of 42100 bp in length
 * 99880 99979: gap of unknown length
 * 99980 121286: contig of 21307 bp in length
 * 121287 121386: gap of unknown length
 * 121387 187530: contig of 66144 bp in length.

JOURNAL	Mikkelsen,T.S., Hillier,W.L., Eichler,E.E., Zody,M.C. and Jaffe,D.B.								
COMMENT	Initial Sequence of the Chimpanzee Genome and Comparison with the Human Genome Unpublished (2005) Contact: Michael C. Zody Broad Institute of MIT and Harvard 320 Charles Street, Cambridge, MA 02141, USA Tel: 6172580933 Fax: 6172580903 Email: mczody@broad.mit.edu Primer A: No sequence submitted Primer B: No sequence submitted STS size: 861 Protocol: 23,021,928 chimpanzee whole genome shotgun reads were aligned to the Human genome NCBI Build 34 (hg16,July 2003) . Chimp WGS reads were from 9 donors, including Clint (Pan troglodytes verus), 3 other Pan troglodytes verus chimps (Donald,Karlien,Yvonne), 3 Pan troglodytes troglodytes chimps (Noemie,Masuku,Clara) and 2 chimps of unknown origin (Gon,Unknown Chimp) . Common names: Pan troglodytes verus is the western chimp and Pan troglodytes troglodytes is the central chimp. To be included in chimpanzee SNP discovery, a read must be at least 500bp in length, at least 50% of its base calls must have Phred score >= 20, at least 30% of its base calls must satisfy SNQS(30,25)(single strand NQS, the base in question has Phred score >= 30, the surrounding 10 bases in the read have Phred score >= 25), and the read must have at least 200 bp SNQS(30,25) bases. Reads not uniquely placed in the genome and read pairs whose two ends were not consistently placed were discarded. After above filtering, NQS(30,25) standard was applied to all pairs of overlapping reads to call NQS bases and SNPs. Alignments (between two reads) with less than 100 NQS bases or with SNP rate > 0.01 were discarded. To exclude alignment between two copies of a single read, comparisons between two reads that share 95% of their genome alignments (>=95% bases of read A and >=95% bases of read B were placed at the same locus of human genome) were discarded.

TITLE Initial Sequence of the Chimpanzee Genome and Comparison with the
Human Genome
JOURNAL Unpublished (2005)
COMMENT

Contact: Michael C. Zody
Broad Institute of MIT and Harvard
320 Charles Street, Cambridge, MA 02141, USA
Tel: 6172580933

Fax: 6172580903

Email: mczody@broad.mit.edu

Primer A: No sequence submitted

Primer B: No sequence submitted

STS size: 942

Protocol:

23,021,928 chimpanzee whole genome shotgun reads were aligned to
the Human genome NCBI

Build 34 (hg16,July 2003). Chimp WGS reads were from 9 donors,

including Clint (Pan

troglodytes verus), 3 other Pan troglodytes verus chimps

(Donald,Karlien,Yvonne), 3 Pan

troglodytes troglodytes chimps (Noemie,Masuku,Clara) and 2 chimps

of unknown origin

(Gon Unknown Chimp). Common names: Pan troglodytes verus is the

western chimp and Pan

troglodytes troglodytes is the central chimp. To be included in

chimpanzee SNP discovery, a

read must be at least 500bp in length, at least 50% of its base

calls must have phred

score >= 20, at least 30% of its base calls must satisfy

SNQS(30,25)(single strand NQS, the

base in question has phred score >= 30, the surrounding 10 bases in

the read have phred

score >= 25), and the read must have at least 200 bp SNQS(30,25)

placed in the genome and read pairs whose two ends were not

consistently placed were

discarded. After above filtering, NQS(30,25) standard was applied

to all pairs of

overlapping reads to call NQS bases and SNPs. Alignments (between

two reads) with less

than 100 NQS bases or with SNP rate > 0.01 were discarded. To

exclude alignment between two
copies of a single read, comparisons between two reads that share
95% of their genome
alignments (>=95% bases of read A and >=95% bases of read B were
placed at the same locus
of human genome) were discarded.

This sequence was finished as follows unless otherwise noted: all chemistry were either double-stranded or sequenced with an alternate 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.
 WI2-801302G5 is from a Whitehead human fosmid library VECTOR: pEpifos-5 Eco721.

* NOTE: This record contains 57 individual
 * sequencing reads that have not been assembled into
 * contigs. Runs of N are used to separate the reads
 * and the order in which they appear is completely
 * arbitrary. Low-pass sequence sampling is useful for
 * identifying clones that may be gene-rich and allows
 * overlap relationships among clones to be deduced.
 * However, it should not be assumed that this clone
 * will be sequenced to completion. In the event that
 * the record is updated, the accession number will
 * be preserved.

----- Summary Statistics

Center project name: H_NH0350L15

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu/gsc>

SOURCE INFORMATION:
The RPC1-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,B., Tateno,M., Cataneese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>
VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RP11-357L18, 2000 bp overlap;
 the clone sequenced to the right is RP11-568024, 2000 bp overlap.
 Actual start of this clone is at base position 9509 of RP11-357L18;
 actual end is at base position 77842 of RP11-568024.

Direct Submission
Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
On May 15, 2001 this sequence version replaced gi:13897415.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em, EMBL; Sw, SWISSPROT; Tr, TrEMBL; Wp, WORMPEP; Information on the WORMPEP database can be found at

http://www.sanger.ac.uk/Projects/C.elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6
RP11-57L9 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. For further details see http://www.Chori.org/bacpac/home.htm

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

Center Code: UWGC
Web site: <http://www.genome.washington.edu>
Contact: uwgchtgs@u.washington.edu
Drafting Center: BCM
----- Project Information
Center project name: chr-3
Center clone name: bc0414
bc0414 was derived from the original BAC (RP11-421P9)
using yeast homologous capture technique.
----- Summary Statistics
Sequencing vector: plasmid; 31% of reads
Sequencing vector: M13; L08821; 69% of reads
Chemistry: Dye-terminator Big Dye; 90% of reads
Chemistry: Dye-primer Bodipy; 10% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 70501 bases at least Q40
Consensus quality: 70557 bases at least Q30
Consensus quality: 70560 bases at least Q20
Insert size: 70560; sum-of-contigs
Quality coverage: 6.7x in Q20 bases; sum-of-contigs

Overlapping Sequences:
5': RP11-733H11 (UMGC:bc0541) AC098477, 4145-bp overlap
3': RP11-659P16 (UMGC:bc0520) AC093416, 1862-bp overlap

Sequence Quality Assessment:
This entry has been annotated with sequence quality
estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than
1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the
GenBank flat file format but are available as part
of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted:
all regions were either double-stranded or sequenced with an
alternate chemistry or covered by high quality data (i.e., Phred
quality >= 30); an attempt was made to resolve all sequencing
problems, such as compressions and repeats; all regions were
covered by at least one plasmid subclone or more than one M13
subclone; and the assembly was confirmed by restriction digest.

Sequence Validation:

Direct Submission
Submitted (13-MAY-1999) Masahira Hattori, The Institute of Physical
and Chemical Research (RIKEN), Genomic Sciences Center (GSC),
Kitasato Univ., 1-15-1 Kitasato, Sagamihara, Kanagawa, 228-8555,
Japan [E-mail:hattori@gsc.riken.go.jp,
URL:http://hgp.gsc.riken.go.jp/, Tel:81-42-778-9923,
Fax:81-42-778-9924]
On Aug 5, 2005 this sequence version replaced gi:6016885.
The sequence is a part of the data (ACCESSION No. AP000174 -
AP000194).
The sequencing project is supported by Japan Science Technology
Corporation (JST) and The Institute of Physical and Chemical
Research (RIKEN).
Evidence from one overlapping clone (RP11-630H12), four mRNAs
(BC069689, BC069709, BC069766, BC069779) and four ESTs (H11586,
BX101811, AI888342, BX419841) indicate that there was an A missing
from the chromosome 21 consensus sequence at position 29630 in this
clone. We confirmed that this clone sequence was correct as
previously submitted by reviewing the original trace data, but
since all other evidence suggests that the base is truly missing we
have inserted an additional base in this submission.

JOURNAL

Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
 Clone requests: clonerequest@sanger.ac.uk
 On Jan 15, 2002 this sequence version replaced gi:11967852.
 The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
 Em.: EMBL; Sw.: SWISSPROT; Tr.: TREMBL; Wp.: WORMPEP; Information on the WORMPEP database can be found at
http://www.sanger.ac.uk/projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at
<http://www.sanger.ac.uk/HGP/Chr1>
 RP4-635E18 is from the library RPCI-4 constructed by the group of Pieter de Jong. For further details see
<http://www.chori.org/bacpac/home.htm>

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

----- Summary Statistics
Sequencing vector: M13; M77815; 97% of reads
Sequencing vector: Plasmid; n/a; 3% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 101354 bases at least Q40

Consensus quality: 109133 bases at least Q30
Consensus quality: 111925 bases at least Q20
Insert size: 121000; agarose-fp
Insert size: 113209; sum-of-contigs
Quality coverage: 5.0 in Q20 bases; agarose-fp
Quality coverage: 5.3 in Q20 b.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 28 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

-----
The following BAC sequence is oriented from the T7 to the SP6 end.
Upstream BAC (overlapping the T7 end) : R-1082A1 (AC=AL13313)
Downstream BAC (overlapping the SP6 end) : R-108B17 -----
Summary Statistics
Assembly program: Phrap; version 2.0
Quality coverage: 7.50x in Q20 bases; sum-of-contigs
-----

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX (HUMA-) HUMAN GENOME SCI INC.
XX Rosen CA, Barash SC, Ruben SM;
XX WPI; 2001-483426/52.
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX Disclosure; SEQ ID NO 29188; 3071pp + Sequence Listing; English.
XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
CC represent sequences used in the exemplification of the present invention

PT Array containing probes for genes involved in mitochondrial biology,
 PT useful for determining mitochondrial biology gene expression profiles for
 PT use in diagnosing pathologies and identifying biochemical pathways.

XX
 XX Claim 2; SEQ ID NO 2781; 201pp; English.

CC The invention relates to a novel array comprising at least two isolated
 CC nucleotide molecules, each molecule having a sequence capable of uniquely
 CC hybridising to a nucleic acid molecule which is an expression product of
 CC a gene involved in mitochondrial biology. The array comprises two or more
 CC isolated nucleic acid molecules or spots, each molecule having a sequence
 CC chosen from sequence of 994 human probes and 2046 mouse probes. An array
 CC of the invention is useful for determining an expression profile of a
 CC mouse or human sample containing nucleic acid, by contacting the array
 CC with the sample under conditions allowing selective hybridisation, and
 CC measuring hybridisation of nucleic acid in the sample to the array to
 CC produce an expression profile. The array is also useful for determining
 CC an expression profile of a first labelled sample containing nucleic acid
 CC relative to a second, differently labelled sample containing nucleic
 CC acid. The second sample is a reference or a standard. An array is useful
 CC for determining an expression profile diagnostic of an energy-metabolism-
 CC related physiological condition. An array of the invention is useful for
 CC determining mitochondrial biology gene expression profiles of organisms,
 CC such as human, mice and closely related species, tissue and organs of
 CC such organisms, which are useful for determining expression profiles
 CC diagnostic of energy metabolism-related physiological conditions.
 CC diagnosing such physiological conditions, identifying biochemical
 CC pathways, genes, and mutations involved in such physiological conditions,
 CC identifying therapeutic agents useful for preventing and/or treating such
 CC physiological conditions, evaluating and/or monitoring the efficacy of
 CC such therapies, and creating and identifying animal models of human
 CC energy metabolism-related physiological conditions. An array is also
 CC useful for defining expression signatures or profiles for mitochondrial
 CC diseases, as well as distinguishing clinical disorders that result from
 CC oxidative phosphorylation (OXPHOS) dysfunction, oxidative stress,
 CC apoptosis and aging. An array of the invention contains probes of genes
 CC not previously recognised to participate in mitochondrial biology. The
 CC sequences shown in ADP33224-ADP35260 represent murine mitochondrial DNA
 CC clones used to make the probes of the invention. Some sequences are not
 CC present, these are SEQ ID NO's 295, 1174, 1213, 1700, 1728, 1730, 1905,
 CC 1906, 2408 and 2643.

DR N-PSDB; AAG62196.
XX
XX Novel 27 isolated human secreted proteins and polynucleotides encoding
PT them useful for treating, diagnosing, preventing Alzheimer's disease,
PT Parkinson's disease, AIDS, rheumatoid arthritis, asthma.
XX
XX Claim 4; Page 469-470; 594pp; English.
XX
XX AAH19170-AAH19250 represent cDNAs corresponding to 27 human secreted
CC protein genes, and AAG62156-AAG62235 represent the proteins they encode.
CC AG62236-AAG62293 represent human secreted protein fragments. The genes
CC and their corresponding secreted proteins are useful for preventing,
CC treating or ameliorating medical conditions, e.g., by protein or gene
CC therapy. Pathological conditions can be diagnosed by determining the
CC amount of the new protein in a sample or by determining the presence of
CC mutations in the new genes. Specific uses are described for each of the
CC 52 genes, based on the tissues in which they are most highly expressed,
CC and include developing products for the diagnosis or treatment of
CC proliferative disorders, cancer, tumours, foetal and developmental
CC abnormalities, haematopoietic disorders, diseases of the immune system,
CC AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation,
CC allergies, neurological disorders (e.g., Alzheimer's disease,
CC Parkinson's disease), cognitive disorders, schizophrenia, asthma, skin
CC disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis,
CC cardiovascular disorders, angiotensin-related disorders, kidney disorders,
CC gastrointestinal disorders, pregnancy-related disorders, endocrine
CC disorders, and infections. The proteins can also be used to aid wound
CC healing and epithelial cell proliferation, to prevent skin aging due to
CC sunburn, to maintain organs before transplantation, for supporting cell
CC culture of primary tissues, to regenerate tissues, to identify their
CC cognate ligands or binding partners, and in chemotaxis, and can be used
CC as a food additive or preservative to modify storage properties.
CC Antibodies specific for a protein of the invention can be used in
CC alleviating symptoms associated with the disorders mentioned above, and
CC in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked
CC immunosorbent assay (ELISA). The present sequence represents a human
CC secreted protein-encoding cDNA of the invention

XX
XX New hematological malignancy-related genes and polypeptides, useful for
PT screening anti-cancer agents, and generating antibodies or
PT immunoconjugates for treating e.g. multiple myeloma cell or chronic
PT lymphocytic leukemia.
XX
XX Claim 1; SEQ ID NO 77; 307pp; English.
XX
XX The present invention describes an isolated polynucleotide (I), which is
CC overexpressed in haematological malignancies, and which encodes a
CC polypeptide or an immunogenic fragment of the polypeptide. Also
CC described: (1) an isolated polypeptide; (2) an expression vector
CC comprising (i) operably linked to an expression control sequence; (3) a
CC host cell comprising an expression vector; (4) an isolated antibody that
CC specifically binds to the polypeptide or its immunogenic fragment; and
CC (5) immunoconjugates comprising the antibody above, or an antibody that
CC specifically binds to a polypeptide, or its immunogenic fragment, encoded
CC by (1). (I) has cytostatic and immunostimulant activities, and can be
CC used in vaccines and immunotherapy. The immunoconjugates are useful in
CC the manufacture of a medicament, particularly as active ingredients in a
CC composition for treating cancer, e.g. multiple myeloma cell, chronic
CC lymphocytic leukaemia, B cell leukaemias, or lymphomas in humans, sheep,
CC primates, goats, bovines, equines, porcines, lupines, canines or felines.
CC The polynucleotide (I) or polypeptide can be used for screening anti-
CC cancer agents, and generating antibodies or immunoconjugates for treating
CC or preventing the above-mentioned diseases. The polynucleotide,
CC polypeptide or antibody can be used for detecting, diagnosing or
CC prognosticating the haematological malignancies described above. The
CC present sequence is used in the exemplification of the present invention.

XX
XX Novel 27 isolated human secreted proteins and polynucleotides encoding
XX PT them useful for treating, diagnosing, preventing Alzheimer's disease,
XX PT Parkinson's disease, AIDS, rheumatoid arthritis, asthma.
XX
XX Claim 4; Page 449-450; 594pp; English.
XX
XX AAH19170-AAH19250 represent cDNAs corresponding to 27 human secreted
XX CC protein genes, and AAG62156-AAG62235 represent the proteins they encode.
XX CC AAG62236-AAG62293 represent human secreted protein fragments. The genes
XX CC and their corresponding secreted proteins are useful for preventing,
XX CC treating or ameliorating medical conditions, e.g., by protein or gene
XX CC therapy. Pathological conditions can be diagnosed by determining the
XX CC amount of the new protein in a sample or by determining the presence of
XX CC mutations in the new genes. Specific uses are described for each of the
XX CC 52 genes, based on the tissues in which they are most highly expressed,
XX CC and include developing products for the diagnosis or treatment of
XX CC proliferative disorders, cancer, tumours, foetal and developmental
XX CC abnormalities, haematopoietic disorders, diseases of the immune system,
XX CC AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation,
XX CC allergies, neurological disorders (e.g., Alzheimer's disease,
XX CC Parkinson's disease), cognitive disorders, schizophrenia, asthma, skin
XX CC disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis,
XX CC cardiovascular disorders, angiogenic disorders, kidney disorders,
XX CC gastrointestinal disorders, pregnancy-related disorders, endocrine
XX CC disorders, and infections. The proteins can also be used to aid wound
XX CC healing and epithelial cell proliferation, to prevent skin aging due to
XX CC burn, to maintain organs before transplantation, for supporting cell
XX CC culture of primary tissues, to regenerate tissues, to identify their
XX CC cognate ligands or binding partners, and in chemotaxis, and can be used
XX CC as a food additive or preservative to modify storage properties.
XX CC Antibodies specific for a protein of the invention can be used in
XX CC alleviating symptoms associated with the disorders mentioned above, and
XX CC in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked
XX CC immunosorbent assay (ELISA). The present sequence represents a human
XX CC secreted protein-encoding cDNA of the invention

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides.

PT

PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX Disclosure; SEQ ID NO 24739; 3071pp + Sequence Listing; English.
XX

CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
CC represent sequences used in the exemplification of the present invention

XX

CC The present invention relates to novel DNA and protein sequences which
CC are associated with carcinomas. The sequences are useful for: (i) for
CC screening drug candidates; (ii) for screening of bioactive agent capable
CC of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC a bioactive agent capable of modulating the activity of CAP; (iv) for
CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC determining Carcinoma Associated (CA) gene copy number. In addition, the
CC CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC carcinoma including lymphoma. The present sequence is one such CA coding
CC sequence. Note: This patent is an equivalent to basic patent
CC US2002182586A1, for which no sequence data was published

 XX (HUMA-) HUMAN GENOME SCI INC.
 PA Rosen CA, Barash SC, Ruben SM;
 PI WPI; 2001-483426/52.
 XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
 PT useful for preventing, diagnosing and/or treating cancers and metastasis.
 XX Disclosure; SEQ ID NO 34483; 307lpp + Sequence Listing; English.
 PS AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
 CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic
 CC activity, and can be used in gene therapy and vaccine production. (I)
 CC proteins and polynucleotides may be used in the prevention, diagnosis and
 CC treatment of diseases associated with inappropriate (I) expression. For
 CC example, they may be used to treat disorders associated with decreased
 CC expression by rectifying mutations or deletions in a patient's genome
 CC that affect the activity of (I) by expressing inactive proteins or to
 CC supplement the patients own production of (I). Additionally, (I)
 CC polynucleotides may be used to produce the secreted (I), by inserting the
 CC nucleic acids into a host cell and culturing the cell to express the
 CC protein. (I) proteins and polynucleotides may be used to prevent,
 CC diagnose and treat immune/haematopoietic-related diseases, especially
 CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
 CC to AAK87694 represent human immune/haematopoietic antigen genomic
 CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
 CC represent sequences used in the exemplification of the present invention

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 38572; 307lpp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins, and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to

CC supplement the patients own production of (I). Additionally, (I)
 CC polynucleotides may be used to produce the secreted (I), by inserting the
 CC nucleic acids into a host cell and culturing the cell to express the
 CC protein. (I) proteins and polynucleotides may be used to prevent,
 CC diagnose and treat immune/haematopoietic-related diseases, especially
 CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
 CC to AAK87694 represent human immune/haematopoietic antigen genomic
 CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
 CC represent sequences used in the exemplification of the present invention

(HUMA-) HUMAN GENOME SCI INC.
PA
XX Rosen CA, Barash SC, Ruben SM;
XX
XX WPI; 2001-483426/52.
XX
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
XX Disclosure; SEQ ID NO 40117; 3071pp + Sequence Listing; English.
XX
XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patient's own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 34481; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAK62170 to AAK61921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the

CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX Rosen CA, Barash SC, Ruben SM;
PI WPI; 2001-483426/52.
XX
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
PT
XX Disclosure; SEQ ID NO 38570; 3071pp + Sequence Listing; English.
XX
XX AAK54951 to AAK64702 encode the human immune/hematopoietic antigen (I)
CC amino acid sequences given in AAK91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/hematopoietic-related diseases, especially
CC cancers and cancer metastases of hematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/hematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
CC represent sequences used in the exemplification of the present invention

XX	Claim 1; SEQ ID NO 21508; 71pp + Sequence Listing; English.
PS	
XX	
XX	The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors

PT cancer cell, useful for treating cancer, e.g. colon cancer, breast
XX cancer, or pancreatic cancer.
XX
XX Claim 1; SEQ ID NO 2805; 97pp; English.
XX
XX The invention relates to 9672 polynucleotides (ACL53866-ACL63537) which
CC are differentially expressed in colon cancer cells. The invention also
CC relates to vectors and host cells comprising a differentially expressed
CC polynucleotide of the invention; a method for detecting a cancerous cell
CC by detection of a gene product of the polynucleotides; a method for
CC inhibiting a cancerous phenotype of a cell by inhibiting a gene product
CC of the polynucleotides; a method of treating an individual with cancer by
CC administration of a modulator of a gene product of the polynucleotides;
CC and an isolated antibody that specifically binds to a polypeptide encoded
CC by one of the 9672 polynucleotides. The polynucleotides, polypeptides,
CC antibodies, and methods are useful for the detection of cancerous cells;
CC for the diagnosis, prognosis and management of cancer; for the
CC identification of agents that modulate the phenotype of cancerous cells;
CC for the identification of therapeutic targets for cancer chemotherapy;
CC and for the treatment of cancer, especially colon cancer and metastasized
CC colon cancer, but also breast or pancreatic cancer. The polynucleotides
CC are also useful as a source of probes or primers for use in diagnostic
CC methods. The differentially expressed polynucleotides or their encoded
CC proteins can additionally be used as vaccines to modulate primary immune
CC responses for the prevention or treatment of cancer. The present sequence
CC represents a specifically claimed polynucleotide which is differentially
CC expressed in colon cancer. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 29187; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAK62170 to AAK61921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins, and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to

CC supplement the patients own production of (I). Additionally, (I)
 CC polynucleotides may be used to produce the secreted (I), by inserting the
 CC nucleic acids into a host cell and culturing the cell to express the
 CC protein. (I) proteins and polynucleotides may be used to prevent,
 CC diagnose and treat immune/haematopoietic-related diseases, especially
 CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
 CC to AAK87694 represent human immune/haematopoietic antigen genomic
 CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
 CC represent sequences used in the exemplification of the present invention

XX New polynucleotides and polypeptides, useful for diagnosis and treatment
 of breast, lung and colon cancer.

XX Claim 1; Page 775-776; 1193pp; English.

XX The invention relates to new polynucleotides and polypeptides, useful for
 diagnosis and treatment of breast, lung and colon cancer. The sequences
 CC can be used in detecting differentially expressed genes correlated with a
 CC cancerous state of a mammalian cell, comprising detecting at least one
 CC differentially expressed gene product in a test sample derived from a
 CC cell suspected of being cancerous. They can also be used to inhibit
 CC tumour growth by modulating expression of a gene product. AAS36943-
 CC AAS39338 represent novel human diagnostic and therapeutic coding
 CC sequences of the invention

XX Novel nucleic acids encoding retina-specific human protein C7orf9,
 C12orf7, MPP4 or F379, useful for diagnosing age-related macular
 PT degeneration or predisposition for macular degeneration, and in gene
 PT therapy techniques.

XX Claim 1; Fig 6c; 120pp; English.

XX The invention relates to isolated nucleic acid encoding retina-specific
 CC human protein C7orf9, C12orf7, MPP4 or F379 or a fragment, derivative or
 CC allelic variation of the above mentioned nucleic acid sequences. Also
 CC included are a recombinant vector containing the nucleic acid, a
 CC recombinant host cell which contains the vector and expresses the
 CC protein, an inhibitor characterised in that it can suppress the activity
 CC of the protein, treating macular degeneration or a predisposition for
 CC macular degeneration, comprising administering to a mammalian subject a
 CC reagent which decreases, inhibits or increases expression of C7orf9,
 CC C12orf7, MPP4 and/or F379 or which leads to the expression of a
 CC biologically active C7orf9, C12orf7, MPP4 and/or F379 protein and a
 CC transgenic non-human animal comprising at least one of the nucleic acids
 CC (active or inactivated). The nucleic acid or protein is useful for
 CC diagnosing macular degeneration, preferably age-related macular
 CC degeneration (AMD) or a predisposition for macular degeneration. The
 CC reagent used in the diagnosis is a C7orf9-, C12orf7-, MPP4- or F379 -
 CC specific nucleic acid probe, or anti-C7orf9, anti-C12orf7, anti-MPP4 or
 CC anti-F379-antibody. The reagent is detectably labeled, with a compound
 CC such as a radioisotope, a bioluminescent compound, a chemiluminescent
 CC compound, a fluorescent compound, a metal chelate or an enzyme. Fragments
 CC of the nucleic acid are useful as probes or primers in a diagnostic
 CC assay, and for identifying further factors involved in development and
 CC progression of macular degeneration. The proteins encoded by the nucleic
 CC acid are useful to identify further unrelated proteins which are
 CC associated with macular degeneration and for use in screening methods
 CC based on protein/protein interactions. The nucleic acid is also useful as
 CC reagents for detecting differences between normal and aberrant expression
 CC of the protein. the nucleic acid is also useful in gene therapy
 CC techniques, and can be used for gene targeting and/or gene replacement
 CC for restoring a mutant gene or for creating a mutant gene via homologous

CC recombination. the protein can be used to identify other proteins
CC involved in development and progression of macular degeneration. The
CC present sequence is a genomic DNA fragment containing an exon of a retina
CC specific gene of the invention

XX
XX Rosen CA, Barash SC, Ruben SM;
XX
XX WPI; 2001-483426/52.
XX
XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
XX useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
XX Disclosure; SEQ ID NO 38694; 3071pp + Sequence Listing; English.
XX
XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
XX amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
XX activity, and can be used in gene therapy and vaccine production. (I)
XX proteins and polynucleotides may be used in the prevention, diagnosis and
XX treatment of diseases associated with inappropriate (I) expression. For
XX example, they may be used to treat disorders associated with decreased
XX expression by rectifying mutations or deletions in a patient's genome
XX that affect the activity of (I) by expressing inactive proteins or to
XX supplement the patients own production of (I). Additionally, (I)
XX polynucleotides may be used to produce the secreted (I), by inserting the
XX nucleic acids into a host cell and culturing the cell to express the
XX protein. (I) proteins and polynucleotides may be used to prevent,
XX diagnose and treat immune/haematopoietic-related diseases, especially
XX cancers and cancer metastases of haematopoietic-derived cells. AAK64703
XX to AAK87694 represent human immune/haematopoietic antigen genomic
XX sequences from the present invention. AAK54942 to AAK54950 and AAM82169
XX represent sequences used in the exemplification of the present invention

XX New nucleic acid for producing a polypeptide, detecting differentially
PT expressed genes correlated with a cancerous state of a mammalian cell,
PT and inhibiting tumor growth.
XX
XX Claim 1; SEQ ID NO 1717; 883pp + Sequence Listing; English.
PS
XX The invention relates to an isolated polynucleotide (ABN27253-ABN33262)
CC with cytostatic activity. The polynucleotide is used to produce a
CC polypeptide, to detect differentially expressed genes correlated with a
CC cancerous state of a mammalian cell and to inhibit tumor growth. The
CC polynucleotide is used as a probe in mapping and tissue profiling. The
CC encoded polypeptide and antibodies to the polypeptide can also be used
CC for therapeutic and diagnostic purposes. The polynucleotide is useful for
CC gene therapy. Note: The sequence data for this patent did not form part
CC of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
XX New isolated polynucleotides, which are differentially expressed in colon
XX cancer cell, useful for treating cancer, e.g. colon cancer, breast
XX cancer, or pancreatic cancer.
XX
XX Claim 1; SEQ ID NO 6223; 97pp; English.
PS
XX The invention relates to 9672 polynucleotides (ACL53866-ACL63537) which
CC are differentially expressed in colon cancer cells. The invention also

relates to vectors and host cells comprising a differentially expressed
polynucleotide of the invention; a method for detecting a cancerous cell
by detection of a gene product of the polynucleotides; a method for
inhibiting a cancerous phenotype of a cell by inhibiting a gene product
of the polynucleotides; a method of treating an individual with cancer by
administration of a modulator of a gene product of the polynucleotides;
and an isolated antibody that specifically binds to a polypeptide encoded
by one of the 9672 polynucleotides. The polynucleotides, polypeptides,
antibodies, and methods are useful for the detection of cancerous cells;
for the diagnosis, prognosis and management of cancer; for the
identification of agents that modulate the phenotype of cancerous cells;
and for the treatment of cancer, especially colon cancer and metastasized
colon cancer, but also breast or pancreatic cancer. The polynucleotides
are also useful as a source of probes or primers for use in diagnostic
methods. The differentially expressed polynucleotides or their encoded
proteins can additionally be used as vaccines to modulate primary immune
responses for the prevention or treatment of cancer. The present sequence
represents a specifically claimed polynucleotide which is differentially
expressed in colon cancer. Note: The sequence data for this patent did
not form part of the printed specification, but was obtained in
electronic format directly from WIPO at

XX Spatially-addressable set of single exon nucleic acid probes, used to
PT measure gene expression in human lung samples.
XX Claim 1; SEQ ID NO 8197; 634pp; English.
XX The invention relates to a spatially-addressable set of single exon
CC nucleic acid probes for measuring gene expression in a sample derived
CC from human lung comprising single exon nucleic acid probes having one of
CC 12614 nucleic acid sequences mentioned in the specification, or their
CC complements or the 12387 open reading frames derived from the 12614
CC probes. Also included are a microarray comprising the novel set of probes
CC; the novel set of probes which hybridise at high stringency to a nucleic
CC acid expressed in the human lung; measuring gene expression in a sample
CC derived from human lung, comprising (a) contacting the array with a
CC collection of detectably labeled nucleic acids derived from human lung
CC mRNA, and (b) measuring the label detectably bound to each probe of the
CC array; identifying exons in a eukaryotic genome, comprising (a)
CC algorithmically predicting at least one exon from genomic sequences of
CC the eukaryote; and (b) detecting specific hybridisation of detectably
CC labeled nucleic acids from eukaryotic lung mRNA, to a single exon probe,
CC having a fragment identical to the predicted exon, the probe is included
CC in the above mentioned microarray; assigning exons to a single gene,
CC comprising (a) identifying exons from genomic sequence by the method
CC above and (b) measuring the expression of each of the exons in several
CC tissues and/or cell types using hybridisation to a single exon
CC microarrays having a probe with the exon, where a common pattern of
CC expression of the exons in the tissues and/or cell types indicates that
CC the exons should be assigned to a single gene; a peptide comprising one
CC of 12011 sequences, mentioned in the specification, or encoded by the
CC probes/open reading frames (ORF). The probes are used for gene expression
CC analysis, and for identifying exons in a gene, particularly using human
CC lung derived mRNA and for the study of lung diseases such as asthma, lung
CC cancer, chronic obstructive pulmonary disease (COPD), interstitial lung
CC disease (ILD), familial idiopathic pulmonary fibrosis, neurofibromatosis,
CC tuberous sclerosis, Gaucher's disease, Niemann-Pick disease, Hermansky-
CC Pudlak syndrome, sarcoidosis, pulmonary haemosiderosis, pulmonary
CC histiocytosis, lymphangioleiomyomatosis, pulmonary alveolar proteinosis,
CC Karagenar syndrome, fibrocystic pulmonary dysplasia, primary ciliary
CC dyskinesia, pulmonary hypertension and hyaline membrane disease. The
CC present sequence is a single exon probe of the invention. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
XX at ftp.wipo.int/pub/published_pct_sequences

XX New antisense oligonucleotides useful for treating e.g. pulmonary
PT vasoconstriction, inflammation, allergies, asthma, hypertension,
PT bronchitis, emphysema, respiratory distress syndrome, ischemia or
PT cancers.
XX
XX Disclosure; Page 1075-1076; 1343pp; English.
XX
XX The present invention describes a new composition comprising an antisense
CC oligonucleotide (ON) with low adenine (up to 15%), which targets
CC nucleic acids involved in bronchoconstriction, allergies, and/or
CC inflammation. The ON can have antiinflammatory, antiallergic,
CC antiasthmatic, cytostatic and analgesic activities. The compositions are
CC useful for the treatment of diseases associated with inflammation,
CC impaired airways, including lung disease and diseases whose secondary
CC effects afflict the lungs of a subject. They can be used for treating
CC e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma,
CC impaired respiration, respiratory distress syndrome, pain, cystic
CC fibrosis, pulmonary hypertension, emphysema, chronic obstructive
CC pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,
CC carcinomas, and cancers which may metastasise to the lungs, including
CC breast and prostate cancer. The reduction of the adenine content of the
CC ONs reduces side effects. The A-containing ONs break down with the
CC release of deoxyadenosine which activates adenosine receptors causing
CC bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the
CC nucleotide sequences given in the sequence listing from the present
CC invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185
CC sequences are also called SEQ ID NO:1 to 185, but the sequences differ
CC from the previously named sequences. SEQ ID NO:11 to 1690 (AAA32323 to
CC AAA33992) are specifically claimed ONs from the present invention. N.B.
CC Sequences given in the disclosure of the present invention do not match
CC up with their corresponding SEQ ID NO: sequences given in the sequence
CC listing

XX Low adenine (A) content antisense oligonucleotides which do not trigger
PT adenosine receptors during metabolism, useful e.g. for treating cancers
PT and respiratory obstructions.
XX
XX Disclosure; Page 1155; 1592pp; English.
XX
XX The present invention describes low adenine (A) content antisense
CC oligonucleotides and compositions (I) comprising them. In the antisense
CC oligonucleotides the A is replaced by a 'Universal' or alternative base.
CC (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,
CC immunosuppressive, antiaethmatic, hypotensive and cytostatic activities.
CC The antisense oligonucleotides and (I) can be used to down-regulate the
CC expression and/or activity of target polypeptides associated with
CC lung/respiratory disorders and malignancies, such as stimulating and
CC activating peptide factors and transmitters, transcription factors,
CC immunoglobulins and antibodies, antibody receptors, cytokines and
CC chemokines, endogenously produced specific and non-specific enzymes,
CC binding proteins, adhesion molecules and their receptors, cytokine and
CC chemokine receptors, adenosine receptors, bradykinin receptors, central
CC nervous system (CNS) and peripheral nervous and non-nervous system
CC receptors, CNS and peripheral nervous and non-nervous system peptide
CC transmitters, defensins, growth factors, vasoactive peptides and
CC receptors, binding proteins and malignancy associated proteins. The
CC antisense oligonucleotides may be used in this way to treat disorders
CC including respiratory obstruction (especially pulmonary obstruction
CC and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or
CC surfactant hypoproduction which are associated with a disease or
CC condition selected from pulmonary vasoconstriction, inflammation,
CC allergies, asthma, impeded respiration, respiratory distress syndrome
CC (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease (COPD),
CC pulmonary transplantation rejection, pulmonary infections, bronchitis,
CC and/or cancer. AAF18434 to AAF21543 represent human polynucleotide
CC fragments and antisense oligonucleotides used in the exemplification of
CC the present invention

XX
XX Pharmaceutical composition for treating ailments associated with impaired
PT respiration, has oligo(s) antisense to specific gene(s) or its
PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
PT ubiqunone.
XX
XX Disclosure; SEQ ID NO 12178; 872pp; English.
XX
XX The invention relates to a novel pharmaceutical composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antinflammatory steroid and ubiqunone. A composition of the invention
CC has antinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
CC receptor, producing bronchodilation, increasing levels of ubiqunone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.
CC Note: The sequence data for this patent is not represented in the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

XX
XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX Rosen CA, Barash SC, Ruben SM;
XX WPI; 2001-457723/49.
XX
XX Isolated polypeptide for treating, preventing and/ or prognosing
XX respiratory disorders related to the lung including lung cancers and also
XX for testing and detection e.g. diagnosis.
XX
XX Claim 1; SEQ ID NO 260; 507pp; English.
XX
XX Sequences AAS29931-AAS30164 represent genomic DNA molecules, which encode
XX the lung antigen polypeptides of the invention. Lung antigen polypeptides
XX and their associated polynucleotides are useful in the diagnosis,
XX treatment and prevention of various types of disorders in e.g. humans,
XX mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A
XX pathological condition can be determined by detecting the presence or
XX absence of a mutation in a lung antigen polynucleotide. The treatable
XX disorders include autoimmune diseases such as neoplasms of the breast or liver,
XX hyperproliferative disorders such as cardiac arrest, cerebrovascular
XX cardiovascular disorders such as cerebral ischaemia, nervous system disorders such as
XX Alzheimer's disease, infections caused by bacteria, viruses and fungi,
XX ocular disorders such as corneal infection, gastrointestinal disorders such as
XX premature labour and infertility, gastrointestinal disorders such as
XX Crohn's disease, renal disorders such as asthma and pleurisy. The polypeptides can
XX also be used to aid wound healing, to prevent skin aging due to sunburn,
XX to maintain organs before transplantation, to regenerate tissues and in
XX chemotaxis. The polypeptides can also be used as a food additive or
XX preservative to increase or decrease storage capabilities. Note: The
XX sequence data for this patent did not form part of the printed
XX specification, but was obtained in electronic format directly from WIPO
XX at ftp.wipo.int/pub/published_pct_sequences

XX
XX (HUMA-) HUMAN GENOME SCI INC.
XX
PI Rosen CA, Ruben SM, Barash SC;
XX
DR WPI; 2003-695900/66.
XX
XX Novel isolated lung antigen polypeptides useful for treating, preventing,
PT diagnosing acute myelogenous leukemias, adenocarcinoma, thrombocytopenia,
PT Von Willebrand's disease.
XX
XX Disclosure; SEQ ID NO 260; 178pp; English.
XX
XX The invention relates to an isolated lung antigen polypeptide sequence or
CC encoded sequence in a cDNA clone. The polypeptide and its polynucleotide
CC are useful for treating, preventing, diagnosing and/or prognosing
CC diseases and/or disorders such as pathological cell proliferative
CC neoplasias e.g. acute myelogenous leukaemias, adenocarcinoma; respiratory
CC disorders such as chronic rhinitis, sinusitis; immunodeficiencies such as
CC X-linked agammaglobulinaemia, X-linked infantile agammaglobulinaemia;
CC inflammatory disorders such as adrenailitis, alveolitis; immune complex
CC diseases such as serum sickness, polyarteritis nodosa; bleeding disorders
CC such as thrombocytopenia, Von Willebrand's disease; acquired platelet
CC dysfunction such as kidney failure, multiple myeloma; disorders
CC associated with macrophage numbers and/or macrophage function such as
CC Gaucher's disease, Niemann-Pick disease; tumours such as colon cancer,
CC pancreatic cancer; renal disorders such as kidney failure, nephritis;
CC bone disorders such as Albers-Schonberg disease, bowlegs; muscle
CC disorders such as Becker's muscular dystrophy, Duchenne's muscular
CC dystrophy; nervous disorders such as ischaemic lesions, traumatic lesions
CC ; endocrine disorders such as Cushing's syndrome, corticosteroid

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Ruben SM, Barash SC;

WPI; 2003-765403/72.

New human respiratory system-related polypeptide and genes, useful for treating, preventing or diagnosing e.g. pneumonia, lung cancer, cystic fibrosis, asthma, sarcoidosis, rhinitis, leukemia, inflammations or sinusitis.

Disclosure; SEQ ID NO 939; 202pp; English.

This invention is related to a novel isolated polypeptide, which comprises a human respiratory system-related polypeptide, and the DNA

CC sequence which encodes it. The invention may be useful for the
CC development of compounds with an antiasthmatic, antibacterial
CC antiinflammatory, cytostatic, antianaemic or antiallergic activity. In
CC addition, the sequences disclosed may be useful for gene therapy. The
CC polypeptide or polynucleotide is useful for treating, preventing or
CC ameliorating a medical condition, for example pneumonia, lung cancer,
CC cystic fibrosis, asthma, sarcoidosis, rhinitis, anaemia, leukaemia,
CC inflammations, sinusitis, chronic obstructive pulmonary disease or
CC infectious diseases. The polypeptide or polynucleotide is also useful for
CC diagnosing any of these diseases or a susceptibility to the disease. The
CC present sequence is that of a human DNA sequence which is related to a
CC human respiratory system associated gene of the invention.

PT New lung specific nucleic acid useful in gene therapy or as vaccines for
PT treating lung cancer (e.g. squamous cell carcinoma) or non-carcinoma lung
PT diseases, as well as for diagnosing, monitoring or staging these
PT diseases.

XX
XX
PS Claim 1; Page 181-182; 282pp; English.

XX
XX
XX The present invention describes an isolated lung specific nucleic acid
XX (LSNA) comprising a sequence that: (a) encodes any of the 93 amino acid
XX sequences comprising 17 - 733 amino acids, given in ABP52873 to ABP52965;
XX (b) comprises any of 115 sequences comprising 148 - 3193 base pairs (bp),
XX given in ABQ75362 to ABQ75376; (c) selectively hybridises to (a) or (b);
XX or (d) has 60 % sequence identity to (a) or (b). LSNA and lung specific
XX protein (LSP) sequences have cytostatic activity and can be used in gene
XX therapy and vaccines. LSNA and LSPs are useful for diagnosing and
XX monitoring the presence and metastases of lung cancer in a patient. An
XX antibody that specifically binds to an LSP can be used for determining
XX the presence of an LSP in a sample, as well as for treating a patient
XX with lung cancer, particularly by inducing an immune response against the

CC lung cancer cell expressing the LSNA or LSPs. In particular, these LSNA
CC and LSPs are useful for identifying, diagnosing, monitoring, staging,
CC imaging and treating lung cancer (e.g. squamous cell carcinoma) and non-
CC cancerous disease states in lung

This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were extracted from a pool of 13 embryos at 8.5-days postcoitum. Double-stranded cDNAs were synthesized with an Oligo(dT) primer [Invitrogen]: 5'-pGACTAGTCTAGATCGGAGCGCGCCCTTTT-3' from 9.1 ug of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to Loner-linker LL-Sal4, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pSPORT1 plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.5 kb. The library was constructed by Yulan Piao (NIA)."

cDNA Library Preparation: M.B. Soares Lab Clone distribution:
Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS. It
should be noted that Bento Soares is generating a small number of
additional specialized non-redundant arrays of BMAP cDNAs whose
availability will be considered under appropriate and limited
collaborative arrangements. The following repetitive elements were
found in this cDNA sequence: 1-82, >PB1D10#SINE/Alu 87-108,
>AT rich#Low complexity 344-364, >AT rich#Low complexity
Seq primer: M13 Reverse.

/clone_lib="NIH BMAP M S4"
/notes="Vector: pT7T3D-Pac (Pharmacia) with a modified
polylinker; Site 1: Not 1; Site 2: Eco RI; The
NIH BMAP M S4 library is a subtracted library of a series,
ultimately derived from a mixture of individually tagged
normalized libraries from ten regions of the mouse brain
(cerebellum, brain stems, olfactory bulbs, hypothalamus,
cortex, amygdala, basal ganglia, pineal gland, striatum,
hippocampus) after a series of subtractions to reduce the
representation of cDNAs from which ESTs had already been
generated. The following serially subtracted libraries
were generated in this process: NIH BMAP M S4,
NIH BMAP M S3.3, NIH BMAP M S3.2, NIH BMAP M S3.1,
NIH BMAP M S2, NIH BMAP M S1. The subtracted library
(NIH BMAP M S4) was constructed as follows: PCR amplified
cDNA inserts from NIH BMAP M S3.3, NIH BMAP M S3.2, and
NIH BMAP M S3.1 clones from which 3' ESTs had been derived
was used as a driver in a hybridization with a pool of
the NIH BMAP M S3.3, NIH BMAP M S3.2, and NIH BMAP M S3.1
libraries in the form of single-stranded circles. The
remaining single-stranded circles (subtracted library)
was purified by hydroxyapatite column chromatography,
converted to double-stranded circles and electroporated
into DH10B bacteria (Life Technologies) to generate the
NIH BMAP M S4 library. This procedure has been previously
described (Bonaldo, Lennon and Soares, Genome Research
6:791-806, 1996)"

Computational Analysis of Full-Length Mouse cDNAs Compared with
Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to
prepare full-length cDNA libraries for rapid discovery of new
genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system-384-format
sequencing pipeline with 384 multicapillary sequencer. Genome Res.
10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA

encyclopedia: real-time sequence clustering for construction of a
nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)

cDNA library was prepared and sequenced in Mouse Genome

Encyclopedia Project of Genome Exploration Research Group in Riken

Genomic Sciences Center and Genome Science Laboratory in RIKEN

Division of Experimental Animal Research in Riken contributed to

prepare mouse tissues.

Tissues were provided by Takashi Ishikawa (Department of Surgery

2 Yokohama City University 3-9 Fukuura, Kanazawa-ku, Yokohama

236-0004 Japan) whose assistance we gratefully acknowledge.

Please visit our web site (http://genome.gsc.riken.go.jp) for

further details.

Email: MES@mail.nih.gov

The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
tail. The sequence tag present in the cDNA between the NotI site
and the oligo-dT track served to identify it as a clone from the
normalized brain stems library cDNA library Preparation: M.B.
Soares Lab Clone distribution: Researchers may obtain BMAP cDNA
clones from RESEARCH GENETICS. It should be noted that Bento Soares
is generating a small number of additional specialized
non-redundant arrays of BMAP cDNAs whose availability will be
considered under appropriate and limited collaborative arrangements
The following repetitive elements were found in this cDNA sequence:
256-277, >AT-rich#Low complexity 282-363, >PB1D10#SINE/Alu
Seq primer: M13 Forward
POLYA=Yes.

            /clone_lib="NIH BMAP M_S4"
            /note="Vector: pT7T3D-Pac (Pharmacia) with a modified
polylinker; Site 1: Not I; Site 2: Eco RI; The
NIH BMAP M_S4 library is a subtracted library of a series,
ultimately derived from a mixture of individually tagged
normalized libraries from ten regions of the mouse brain
(cerebellum, brain stems, olfactory bulbs, hypothalamus,
cortex, amygdala, basal ganglia, pineal gland, striatum,
hippocampus) after a series of subtractions to reduce the
representation of cDNAs from which ESTs had already been
generated. The following serially subtracted libraries
were generated in this process: NIH BMAP M_S4,
NIH BMAP M_S3.3, NIH BMAP M_S3.2, NIH BMAP M_S1,
NIH BMAP M_S4) was constructed as follows: PCR amplified
cDNA inserts from NIH BMAP M_S3.3, NIH BMAP M_S3.2, and
NIH BMAP M_S3.1 clones from which 3' ESTs had been derived
was used as a driver in a hybridization with a pool of
the NIH BMAP M_S3.3, NIH BMAP M_S3.2, and NIH BMAP M_S3.1
libraries in the form of single-stranded circles. The
remaining single-stranded circles (subtracted library)
was purified by hydroxyapatite column chromatography,

/note="Vector: pCMV-SPORT6 (Invitrogen); Site 1: SalI; Site 2: NotI; Mouse cDNA project by the Laboratory of Genetics, National Institute on Aging (NIA), Intramural Research Program, NIH (<http://lgsun.grc.nia.nih.gov/cDNA>). This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were extracted from a pool of 3 embryos at 11.5-days postcoitum. Double-stranded cDNAs were synthesized with an Oligo(dT) primer [Invitrogen]:
 5'-pGACTAGTCTAGATCGGCGCGCCCTTTTTTTTTTTT-3' from 2ug of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to lone-linker LL-SalI, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pCMV-SPORT6 plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 3.3Kb. The library was constructed by Yulan Piao."

Computational Analysis of Full-Length Mouse cDNAs Compared with
Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to
prepare full-length cDNA libraries for rapid discovery of new
genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format
sequencing pipeline with 384 multicapillary sequencer. Genome Res.
10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA
encyclopedia: real-time sequence clustering for construction of a
nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome
Encyclopedia Project of Genome Exploration Research Group in Riken
Genomic Sciences Center and Genome Science Laboratory in RIKEN.
Division of Experimental Animal Research in Riken contributed to
prepare mouse tissues.
Tissues were provided by Takashi Ishikawa (Department of Surgery
2 Yokohama City University 3-9 Fukuura, Kanazawa-ku, Yokohama
236-0004 Japan) whose assistance we gratefully acknowledge.

Computational Analysis of Full-length Mouse cDNAs Compared with

Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)

Normalization and subtraction of cap-trapper-selected cDNAs to

prepare full-length cDNA libraries for rapid discovery of new

genes. Genome Res. 10 (10), 1617-1630 (2000)

RIKEN integrated sequence analysis (RISA) system--384-format

sequencing pipeline with 384 multicapillary sequencer. Genome Res.

10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA

encyclopedia: real-time sequence clustering for construction of a

nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)

cDNA library was prepared and sequenced in Mouse Genome

Encyclopedia Project of Genome Exploration Research Group in Riken

Genomic Sciences Center and Genome Science Laboratory in RIKEN.

Division of Experimental Animal Research in Riken contributed to

prepare mouse tissues.

Please visit our web site (http://genome.gsc.riken.go.jp) for

further details.

NotI; Mouse cDNA project by the Laboratory of Genetics,

National Institute on Aging (NIA), Intramural Research

Program, NIH (http://nigms.nih.gov/cDNA). This is

a long-transcript enriched cDNA library (Ref. Genome Res.

11: 1553-1558 (2001). [PMID: 11541199]). Total RNAs were

extracted from a pool of four embryos at 7.5-days

postcoitum. Double-stranded cDNAs were synthesized with an

Oligo(dT) primer [Invitrogen].

5'-pGACTAGTCTAGATCGAGGCGCCCTTTT-3' from

7 ug of total RNA, treated with T4 DNA polymerase, and

purified by ethanol-precipitation. The cDNAs were ligated
 to Lone-linker L1-Sal4, purified by phenol/chloroform, and
 separated from free linkers by Centricon 100. Then, the
 cDNAs were amplified by long-range high fidelity PCR using
 Ex Taq polymerase (Takara) with a primer Sal4-S. The
 products were purified by phenol/chloroform and Centricon
 100. The cDNAs were digested with SalI and NotI enzymes
 and cloned into SalI/NotI site of pSPORT1 plasmid vector.
 The DH10B E. coli host was transformed with the ligation
 mixture by the standard chemical method. The average
 insert size is about 2.2 kb. The library was constructed
 by Yulan Piao (NIA)."

musculus C57BL/6J (male) was obtained from the Jackson

Laboratory Mouse DNA Resource

(http://www.jax.org/resources/documents/dnares/). The DNA

was hydrodynamically sheared by repeated passage through a

0.005 inch orifice at constant velocity. The sheared DNA

was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptor DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pMD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptor mouse DNA was annealed to adaptor vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

RESULT 50
US-09-949-016-119142/c
; Sequence 119142, Application US/09949016
; Patent No. 6812339
; GENERAL INFORMATION:
; APPLICANT: VENTER, J. Craig et al.
; TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
; TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
; FILE REFERENCE: CL001307
; CURRENT APPLICATION NUMBER: US/09/949,016
; CURRENT FILING DATE: 2000-04-14
; PRIOR APPLICATION NUMBER: 60/241,755
; PRIOR FILING DATE: 2000-10-20
; PRIOR APPLICATION NUMBER: 60/237,768
; PRIOR FILING DATE: 2000-10-03
; PRIOR APPLICATION NUMBER: 60/231,498
; PRIOR FILING DATE: 2000-09-08
; NUMBER OF SEQ ID NOS: 207012
; SOFTWARE: FastSeq for Windows Version 4.0
; SEQ ID NO 119142
; LENGTH: 601
; TYPE: DNA
; ORGANISM: Human

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sycamore.N.
Direct Submission
Submitted (04-FEB-2005) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vegas@sanger.ac.uk
Clone requests: clonerequest@sanger.ac.uk
On Mar 21, 2002 this sequence version replaced gi:19031807.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em.; EMBL; Sw.; SWISSPROT; Tr.; TREMBL; Wp.; WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep -----
Genome Center
Center: Wellcome Trust Sanger Institute
Center code: SC
Web site: http://www.sanger.ac.uk
Contact: vegas@sanger.ac.uk
-----
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.
RP23-430121 is from the RPCI-23 Mouse BAC Library
constructed by the group of Pieter de Jong.
For further details see http://www.chori.org/bacpac/home.htm
VECTOR: pBAC3.6.

Contact: vegas@sanger.ac.uk

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.
RP23-259D24 is from the RPCI-23 Mouse BAC Library
constructed by the group of Pieter de Jong.
For further details see http://www.chori.org/bacpac/home.htm

 Center project name: C_PT010P16

NOTICE:

This sequence was finished as follows unless otherwise noted:
 all regions were double stranded, sequenced with an alternate
 chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by sequence
 from more than one subclone; and the assembly was confirmed by
 restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren,
 Department of Genetics, Washington University, St. Louis MO. For
 additional information about the map position of this sequence, see
<http://genome.wustl.edu>

SOURCE INFORMATION:

The RPCI-43 BAC Library has been constructed by Chung-Li Shu. DNA
 was isolated from white blood cells obtained from a male chimpanzee
 (Pan troglodytes, 'Clint', Yerkes #C0471; birthdate: 6-6-80). The
 clone and detailed information can be obtained from ResGen
 (<http://www.resgen.com>) or Pieter de Jong and co-workers at
<http://www.bacpac.chori.org>.

This sequence is the entire insert of the clone.

Rat Genome Sequencing Consortium.
Direct Submission
Submitted (22-SEP-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Sep 19, 2002 this sequence version replaced gi:21744211.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the
sequence may extend beyond the ends of the clone and there may be
contigs that consist entirely of whole genome shotgun sequence
reads. Both end sequences and whole genome shotgun sequence only
contigs will be indicated in the feature table.

----- Project Information
Center project name: GORW
Center clone name: CH230-24L19
----- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 211787 bases at least Q40
Consensus quality: 214627 bases at least Q30
Consensus quality: 216603 bases at least Q20
Estimated insert size: 231080; sum-of-contigs estimation
Quality coverage: 4x in Q20 bases; sum-of-contigs estimation
-----
* NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
consists of 2 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.
*
* 15842: contig of 15842 bp in length
* 15843 15942: gap of unknown length
* 15943 276234: contig of 260292 bp in length.

COMMENT
On Jul 31, 2004 this sequence version replaced gi:50428583.
Sequencing is completed to a minimum standard of double strand
coverage with a minimum of 2 clones and 2 reads with no ambiguities
or 2 chemistries with a minimum of 2 clones and 3 reads with no
ambiguities. If the sequence quality does not meet this standard,
it will be indicated in the annotation.

----- Project Information
Center project name: chr-1
Center clone name: RP11-507114 (sc0371)
----- Summary Statistics
Sequencing vector: plasmid; L08752; 100% of reads
Chemistry: Dye-terminator ET; 49% of reads
Assembly: Dye-terminator Big Dye; 51% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 127931 bases at least Q40
Consensus quality: 127937 bases at least Q30
Consensus quality: 128000 bases at least Q20
Insert size: 128000; sum-of-contigs
Quality coverage: 19.0x in Q20 bases; sum-of-contigs
-----
Overlapping Sequences:
5': RF4-648113 (UWGC:sc0196) AC093563, 110680-bp overlap
3': RP11-539011, BX323048, 45716-bp overlap
Note: This is a partial submission. The full clone overlaps are
not included.
-----
Sequence Quality Assessment:
This entry has been annotated with sequence quality
estimates computed by the Phrap assembly program.
Quality levels above 40 are expected to have less than
1 error in 10,000 bp. Base-by-base quality values are
not generally visible from the GenBank flat file format
but are available as part of this entry's ASN.1 file.
-----
This sequence was finished as follows unless otherwise noted:
all regions were either double-stranded or sequenced with an
alternate chemistry or covered by high quality data (i.e., Phred
quality >= 30); an attempt was made to resolve all sequencing
problems, such as compressions and repeats; all regions were
covered by at least one plasmid subclone or more than one M13
subclone; and the assembly was confirmed by restriction digest.
-----
Sequence Validation:
This sequence has been validated by Multiple Complete Digest
fingerprinting. Comparison of the experimentally derived digest
fragments with sequence-predicted fragments is given below.
The electronically-digested sequence consists of both insert and
vector, in order to accurately represent the entire circular BAC.
Small fragments below a variable cutoff (approximately 400-800 bp)
are not resolved in the fingerprint and hence do not appear
in the table. There are no significant remaining discrepancies
between the experimental and predicted values. Uniquely ordered
fragments are separated by dashed lines.

Web site: http://www.sanger.ac.uk
Contact: zface@sanger.ac.uk

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest, except on the rare
occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep Repeat names
beginning 'Dr' were identified by the Recon repeat discovery system
(Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr',
were identified by Rick Waterman (Stephen Johnson lab, WashU). For
further information see http://www/Projects/D_rerio/fishmask.shtml
CH211-237E12 is from a CHORI-211 BAC library

COMMENT

JOURNAL

PUBMED

NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RP11-703H20; the clone sequenced to the right is RP11-556N4. Actual start of this clone is at base position 1995 of RP11-703H20; actual end is at base position 181489 of RP11-804N11.

The region from 97601 to 97728 is covered only by a per product from clone DNA. Data from AC053517 was used to finish AC104828.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu/gsc>

SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. *Genomics* 51:1-8. The clone may be obtained either from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

Direct Submission
Submitted (09-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 9, 2003 this sequence version replaced gi:24941198.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

and whole genome shotgun sequencing reads assembled using Atlas
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: FFGH
Center clone name: CH240-84A20
----- Summary Statistics

Assembly program: Atlas 3.0;
Consensus quality: 268871 bases at least Q40
Consensus quality: 273631 bases at least Q30
Consensus quality: 277456 bases at least Q20
Estimated insert size: 274073; sum-of-contigs estimation
Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
* NOTE: This sequence may represent more than one clone.
* NOTE: This is a 'working draft' sequence. It currently
consists of 48 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

          During sequence assembly data is compared from overlapping clones.
          Where differences are found these are annotated as variations
          together with a note of the overlapping clone name. Note that the
          variation annotation may not be found in the sequence submission
          corresponding to the overlapping clone, as we submit sequences with
          only a small overlap as described above.
```

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw: SWISSPROT; Tr: TrEMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at

http://www.sanger.ac.uk/projects/C_elegans/wormpep Clone-derived Zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.

Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhiyong Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see

http://www.sanger.ac.uk/projects/D_rerio/fishmaek.shtml CH211-209P5 is from a CHORI-211 BAC library

VECTOR: pTARBAC2.1.

Direct Submission

Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA

On May 10, 2003 this sequence version replaced gi:25093373.

The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

----- Project Information

Center project name: GHX

Center clone name: CH230-92N23

----- Summary Statistics

Assembly program: Atlas 3.0;

Consensus quality: 213914 bases at least Q40

Consensus quality: 218379 bases at least Q30

Consensus quality: 221566 bases at least Q20

Estimated insert size: 232388; sum-of-contigs estimation

Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

*** NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* 1 79107: contig of 79107 bp in length
* 79108 79207: gap of unknown length

Direct Submission
Submitted (31-JAN-2003) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Feb 1, 2003 this sequence version replaced GI:27902085.
Sequence from the Mouse Genome Sequencing Consortium whole genome
shotgun may have been used to confirm this sequence. Sequence data
from the whole genome shotgun alone has only been used where it has
a phred quality of at least 30.

----- Genome Center

Center: Wellcome Trust Sanger Institute

Center code: SC

Web site: <http://www.sanger.ac.uk>

Contact: humquery@sanger.ac.uk

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest, except on the rare
occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:

Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information

on the WORMPEP database can be found at

http://www.sanger.ac.uk/projects/C_elegans/wormpep RP23-109E21 is

from the RPCI-23 Mouse BAC Library

constructed by the group of Pieter de Jong.

TITLE

JOURNAL

COMMENT

Submitted (18-DEC-2004) Human Genome Sequencing Center, Baylor
College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

Sequencing is completed to a minimum standard of double strand
coverage with a minimum of 2 clones and 2 reads with no ambiguities
or 2 chemistries with a minimum of 2 clones and 3 reads with no
ambiguities. If the sequence quality does not meet this standard,
it will be indicated in the annotation.

The repeat regions shown were identified using RepeatMasker by
Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui

Zhang.

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

COMMENT

On Sep 14, 2002 this sequence version replaced gi:21736569.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: <http://www.hgsc.bcm.tmc.edu/>
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: GNMF
Center clone name: CH230-64A8
----- Summary Statistics

Assembly program: Phrap; version 0.990329
Consensus quality: 229400 bases at least Q40
Consensus quality: 232950 bases at least Q30
Consensus quality: 235263 bases at least Q20
Estimated insert size: 253424; sum-of-contigs estimation
Quality coverage: 4x in Q20 bases; sum-of-contigs estimation

- * NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
- * NOTE: This sequence may represent more than one clone.
- * NOTE: This is a 'working draft' sequence. It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have been provided by the submitter.
- * This sequence will be replaced
- * by the finished sequence as soon as it is available and the accession number will be preserved.
- * 1 261112: contig of 261112 bp in length.

Direct Submission

Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,

Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk

Clone requests: clonerequest@sanger.ac.uk

On Nov 25, 2001 this sequence version replaced gi:17017834.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information

in the WORMPEP database can be found at

http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence

was generated from part of bacterial clone contigs of human

chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping

Group. Further information can be found at

<http://www.sanger.ac.uk/HGP/Chr9>

RP11-100N5 is from the library RPI-11.1 constructed by the group

of Pieter de Jong. For further details see

<http://www.chori.org/bacpac/home.htm>

            Center project name: efl
            Center clone name: 279N10

The sequence data in this record represents an 'enhanced'
version of a Phase 2 submission. Specifically, the indicated
order and orientation of each sequence contig has been
established using one or more of the following: read-pair
data from individual subclones, overlaps with neighboring
clones, alignment with available reference sequence (e.g.,
human), and/or confirmation by PCR testing. In addition,
the sequence assembly is based on at least 8X average
coverage in Q20 bases and has been reviewed to rule out
gross misassemblies, the low-quality ends of sequence
contigs have been trimmed away, and each base is associated
with a Phrap-derived quality score.
----- Summary Statistics
Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 140709 bases at least Q40
Consensus quality: 140932 bases at least Q30
Consensus quality: 141174 bases at least Q20
Insert size: 123000; agarose-fp
Insert size: 141263; sum-of-contigs
Quality coverage: 11.81x in Q20 bases; agarose-fp
Quality coverage: 10.28x in Q20 bases; sum-of-contigs

Cow Genome Sequencing Consortium.
Direct Submission
Submitted (01-JUL-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Jun 29, 2005 this sequence version replaced gi:59276096.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Center: Baylor College of Medicine

Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
Project Information
Center project name: FGCN
Center clone name: CH240-7286
Assembly program: Atlas 3.0;
Consensus quality: 152641 bases at least Q40
Consensus quality: 153258 bases at least Q30
Consensus quality: 153807 bases at least Q20
Estimated insert size: 156808; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

1 2299: contig of 2299 bp in length
2300: gap of 83 bp
2382: contig of 9618 bp in length
12001: gap of 50 bp
12050: gap of 26562 bp in length
12051: gap of 153 bp
38765: gap of 16952 bp in length
38766: gap of 50 bp
55767: gap of 50 bp
99117: contig of 43350 bp in length
99157: gap of 50 bp
99168: gap of 50 bp
99168: gap of 50 bp
144531: contig of 45363 bp in length
144531: gap of 50 bp
144581: contig of 10183 bp in length.

XX Novel human cancer associated protein encoded within open reading frame
PT
PT of cancer associated gene, useful as targets for diagnosing cancer.
XX
XX Claim 16; SEQ ID NO 770; 182pp; English.
PS
XX
XX The invention relates to cancer-associated proteins (CAP) and the cancer-
CC
CC associated (CA) nucleic acids encoding them. The invention also relates
CC
CC to a method for treating cancers involving administering to a patient an
CC
CC inhibitor of CAP, and a method of screening for anticancer activity in a
CC
CC potential drug involving providing a cell that expresses a CA gene,
CC
CC contacting a tissue sample derived from a cancer cell with an anticancer
CC
CC drug candidate and monitoring the effect of the anticancer drug candidate
CC
CC on expression of the CA gene. The CAP proteins are useful for detecting
CC
CC cancer associated with expression of a CAP protein in a test cell sample
CC
CC and for screening for a bioactive agent capable of modulating the
CC
CC activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC
CC cancer, involving determining the expression of a CA nucleic acid in a
CC
CC tissue. This sequence represents a human CA gene of the invention. Note:

CC The invention relates to an isolated polynucleotide encoding a

polypeptide with biological activity. The polynucleotides and

polypeptides are useful in diagnostics, forensics, gene mapping,

CC identification of mutations responsible for genetic disorders and other

traits, to assess biodiversity, as nutritional sources or supplements.

CC The polynucleotides may also be used as molecular weight markers,

CC chromosome markers or map related gene positions, or as an antigen to

raise anti-DNA antibodies or elicit immune response. The polypeptides are

CC useful for raising antibodies, as markers for tissues in which the

corresponding polypeptide is expressed, for re-engineering damaged or

CC diseased tissues, for treating myeloid or lymphoid cell disorders, in

CC bone cartilage, tendon, ligament and/or nerve tissue growth or

regeneration, in wound healing, in tissue repair and replacement, in

CC

CC healing of burns, incisions and ulcers, and in treating cancer. The
CC present sequence represents a novel human expressed sequence tag, EST.

CC The invention relates to a novel isolated polynucleotide comprising any
of the 235 nucleotide sequences described in the specification. The

CC invention further comprises: an isolated polynucleotide encoding a

polypeptide with biological activity, where the polynucleotide hybridizes

CC to one of the 235 novel polynucleotides under stringent hybridization

conditions, or having greater than about 99% sequence identity with the

CC novel polynucleotide; a vector comprising a novel polynucleotide; an

expression vector comprising the novel polynucleotide; a host cell

CC genetically engineered to comprise the novel polynucleotide, which can be

operatively associated with a regulatory sequence that modulates

CC expression of the polynucleotide in the host cell; an isolated

polypeptide encoded by the novel polynucleotide, or a polynucleotide

CC hybridizing under stringent conditions to the novel polynucleotide; a

composition comprising the polypeptide and a carrier; an antibody

CC directed against the polypeptide; a method for detecting the novel

polynucleotide in a sample; a method for detecting the polypeptide in a

CC sample; a method for identifying a compound that binds to the polypeptide

CC; a method for producing the polypeptide; an isolated polypeptide

CC comprising any of the 235 amino acid sequences described in the

CC specification; and a collection of polynucleotides comprising of at least

one of the polynucleotides cited above. The polypeptides and

CC polynucleotides of the invention have antiinflammatory, cytostatic, and

CC disease, epilepsy, angina, neurodegeneration, diabetes, anxiety,
CC depression, schizophrenia, viral disease, gastric ulcers, stroke,
CC Alzheimer's disease and as a contraceptive

PT Database global search for G protein-coupled receptors, proteins and
PT encoded genes for studying in vivo signal transduction mechanism and
PT identifying targets for drug development.
XX
PS Claim 9; SEQ ID NO 221; 97pp + Sequence Listing; Japanese.
XX
CC The invention relates to a method for screening G protein-coupled
CC receptor (GPCR) genes (ABZ42870-ABZ43216) and/or GPCR proteins (ABP95596-
CC ABP95942) by extracting open-reading frames containing 6-8 transmembrane
CC domains with 250-1000 amino acid residues to give a gene homologous with
CC a known GPCR gene. The receptor proteins and encoded genes are useful for
CC studying in vivo signal transduction mechanism and identifying targets
CC for drug development e.g. based on olfactory and gustatory receptors in
CC form of agonists and antagonists by screening intrinsic and extrinsic
CC ligands as bitter taste inhibitors, taste enhancers and fragrance
CC improvers. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT New stress-responsive nucleic acid, useful for altering the
PT responsiveness of a plant, e.g. cereal, to an abiotic stress such as cold
PT stress, salt stress or osmotic stress.
XX
PS Disclosure; SEQ ID NO 10147; 89pp; English.
XX
CC The invention relates to novel abiotic stress responsive polynucleotides
CC and polypeptides. Also disclosed are vectors, expression cassettes, host
CC cells, and plants containing such polynucleotides. Also disclosed are
CC methods for using the polynucleotides and polypeptides to alter the
CC responsiveness of a plant to abiotic stress. The invention is useful in
CC agriculture. The nucleic acid is useful for determining whether a test
CC plant has been exposed to an abiotic stress condition. It is also useful
CC for selecting an agent that alters abiotic stress regulated
CC polynucleotide expression in a plant cell, and to identify a homolog or
CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid
CC molecule and the polypeptide encoded by it are useful in altering the
CC responsiveness of a plant to an abiotic stress, such as cold stress, salt
CC stress, osmotic stress or any of their combinations. The present sequence
CC is used in the exemplification of the invention

XX New polynucleotides which encode polypeptides involved in olfactory
PT sensation for identifying olfactory agonists and antagonists.
PT
XX Claim 8; Page 439; 1857pp; English.
XX
XX The present sequence is one of a number of isolated polynucleotides which
CC encode polypeptides involved in olfactory sensation. The polynucleotides
CC can be used in screening for olfactory agonists and antagonists. The
CC methods allow for the determination of primary scents and the
CC identification of the odour receptors used to detect these primary
CC scents. The methods also enable determination of secondary scents and the
CC identification of combinations of odour receptors that are involved in
CC detecting such secondary scents. This enables the construction of a scent
CC representation (also called a scent fingerprint or scent profile), which
CC may be used to re-create and edit scents. Libraries of olfactory
CC receptors are useful for determining the interaction pattern of a
CC composition with the receptors, and can be used for determining
CC differences in the olfactory faculties of different individuals

XX This invention describes a novel disease detection and treatment molecule
CC polypeptide (MDDT) which has anti-inflammatory, immunosuppressive,
CC osteopathic, cycostatic, anti-HIV, haemostatic, nephrotropic,
CC antianaemic, antipsoriatic and hepatotropic activity. The polynucleotides
CC and the polypeptides of the invention can be used for gene therapy,
CC protein replacement therapy and are useful for treating a variety of
CC diseases or conditions. These polypeptides or polynucleotides are
CC particularly useful for diagnosing, treating or preventing cell
CC proliferative disorders (e.g. cancers including adenocarcinoma,
CC leukaemia, lymphoma, melanoma, myeloma or sarcoma), anaemia, Crohn's
CC disease, acquired immunodeficiency syndrome (AIDS), Goodpasture's
CC syndromes, inflammation, osteoporosis, thrombocytopaenia, psoriasis or
CC hepatitis. ABX34440-ABX34835 encode the MDDT polypeptides represented in
CC ABU1450-ABU11845, described in the disclosure of the invention. NOTE:
CC The sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

 PT cell proliferative disorders, cardiovascular disorders and viral
 PT infections.
 XX
 XX Claim 5; Page 136-137; 141pp; English.

XX The invention describes a novel isolated polypeptide, selected from a
 CC group of 21 G-protein coupled receptor polypeptides (GCREC) and useful in
 CC vaccines and gene therapy. The polypeptide (I) is useful for screening
 CC for agonist or antagonist of (I), compounds specifically binding to (I),
 CC or compounds that modulate the activity of (I). The polynucleotide
 CC encoding (I) is useful for screening a compound for effectiveness in
 CC altering expression of a target polynucleotide comprising (II), by
 CC exposing a sample comprising the target polynucleotide to a compound,
 CC detecting altered expression of the target polynucleotide, and comparing
 CC the expression of the target polynucleotide in the presence of varying
 CC amounts of compound and in the absence of the compound. (I) and (II) are
 CC useful for diagnosis, treatment and prevention of cell proliferative
 CC disorders (e.g. cancers, arteriosclerosis, atherosclerosis), neurological
 CC disorders (e.g. epilepsy, stroke, schizophrenic disorders and
 CC neuroskeletal disorders), cardiovascular disorders (e.g. anorexia,
 CC ischaemic heart disease), gastrointestinal disorders (e.g. diabetes mellitus,
 CC peptic ulcer), autoimmune/inflammatory disorders (e.g. diabetes mellitus,
 CC osteoporosis, psoriasis), and metabolic disorders such as obesity.
 CC Furthermore, the polynucleotide is useful; as primers for detecting
 CC single nucleotide polymorphisms; as elements in microarray, to monitor or
 CC measure protein-protein interactions, drug-target interactions, and gene
 CC expression profiles; to generate a transcript image of a tissue or cell
 CC type, and to generate hybridisation probes useful in mapping the
 CC naturally occurring genomic sequence. This sequence encodes G-protein
 CC coupled receptor 11, one of 21 GCREC proteins described in the method of
 CC the invention

 XX Novel polypeptides and nucleic acids of G protein coupled receptor useful
 PT for diagnosing and treating diseases e.g. anorexia, asthma, Parkinson's
 PT disease, acute heart failure and infections.
 XX Claim 9; Page 58; 202pp; English.
 XX The invention relates to human G protein coupled receptor (GPCR)
 CC polypeptides and the polynucleotides encoding them. GPCR polypeptides are
 CC useful for treating or preventing a GPCR-associated disorder which is
 CC related to cell signalling processing and metabolic pathway modulation,
 CC which includes cardiomyopathy and atherosclerosis in a human. The
 CC sequences are useful in treatment of patients suffering from
 CC developmental diseases, immune diseases, non insulin-dependent diabetes
 CC mellitus (NIDDM1), bacterial, fungal, protozoal and viral infections
 CC (e.g. infections caused by HIV), cancer (e.g. adenocarcinoma, lymphoma),
 CC anorexia, asthma, neurodegenerative disorders (e.g. Parkinson's disease),
 CC acute heart failure, hypertension, osteoporosis, Crohn's
 CC disease, multiple sclerosis, osteodystrophy, angina pectoris, myocardial
 CC infarction, ulcers, allergies, neurological disorders including anxiety,
 CC schizophrenia, manic depression, delirium, dementia, Huntington's
 CC disease, Alzheimer's disease, Tourette's syndrome, metabolic disorders

CC and obesity. This sequence represents cDNA encoding a GPCR polypeptide of

 XX New polynucleotides encoding a polypeptide with biological activity,
 PT useful for treating inflammation, leukemias, nervous system disorders, or
 PT infections.
 XX Claim 1; SEQ ID NO 190; 253pp; English.
 XX The invention relates to a novel isolated polynucleotide comprising any
 CC of the 235 nucleotide sequences described in the specification. The
 CC invention further comprises: an isolated polynucleotide encoding a
 CC polypeptide with biological activity, where the polynucleotide hybridizes
 CC to one of the 235 novel polynucleotides under stringent hybridization
 CC conditions, or having greater than about 99% sequence identity with the
 CC novel polynucleotide; a vector comprising a novel polynucleotide; an
 CC expression vector comprising the novel polynucleotide; a host cell
 CC genetically engineered to comprise the novel polynucleotide, which can be
 CC operatively associated with a regulatory sequence that modulates
 CC expression of the polynucleotide in the host cell; an isolated
 CC polypeptide encoded by the novel polynucleotide, or a polynucleotide
 CC hybridizing under stringent conditions to the novel polynucleotide; a
 CC composition comprising the polypeptide and a carrier; an antibody
 CC directed against the polypeptide; a method for detecting the novel
 CC polynucleotide in a sample; a method for detecting the polypeptide in a
 CC sample; a method for identifying a compound that binds to the polypeptide
 CC ; a method for producing the polypeptide; an isolated polypeptide
 CC comprising any of the 235 amino acid sequences described in the
 CC specification; and a collection of polynucleotides comprising of at least
 CC one of the polynucleotides cited above. The polypeptides and
 CC polynucleotides of the invention have antiinflammatory, cytostatic, and

CC antimicrobial activities. The novel polynucleotide may be used to treat
 CC disorders by gene therapy. The polypeptides and polynucleotides are
 CC useful for treating inflammation, leukaemias, nervous system disorders,
 CC or infections. This sequence represents one of the 235 novel isolated
 CC polynucleotides of the invention.

PT diagnosing, treating cardiomyopathy, atherosclerosis, cancer,
 PT neurodegenerative, autoimmune disorders, infectious diseases and
 PT diabetes.

XX Claim 8; Page 11; 213pp; English.

XX ABN89112 to ABN89130 encoding the human G protein-coupled receptor
 CC (GPCR) proteins given in ABB81440 to ABB81458. GPCR proteins can have
 CC antiatherosclerotic, anorectic, antibacterial, fungicide, protozoacide,
 CC virucide, analgesic, cytostatic, immunomodulator, metabolic, hypotensive,
 CC antiasthmatic, antiparkinsonian, hypertensive, osteopathic, anti-HIV,

 CC antidepressant, antimanic, anticonvulsant, haemostatic, antiaddictive,
 CC immunosuppressive, cerebroprotective, dermatological, antiaddictive,
 CC nephrotropic and gynaecological activities, and can be used in vaccines
 CC and gene therapy. GPCR proteins and polynucleotides can be used for
 CC treating or preventing a GPCR-associated disorder such as
 CC cardiomyopathy, atherosclerosis, a disorder related to cell signal
 CC processing and metabolic pathway modulation, in a human. GPCR proteins
 CC and polynucleotides can also be used in the manufacture of a medicament
 CC for preventing or treating disorders or syndromes including developmental
 CC diseases, cardiomyopathy, atherosclerosis, cancer, neurodegenerative
 CC disorders, autoimmune disorders, infectious diseases and diabetes.
 CC ABN89131 to ABN89187 represent PCR primers and probes used in the
 CC exemplification of the present invention

PT detecting, diagnosing, monitoring, treating, staging and predicting
PT cancers in humans having cancer and non-cancerous prostate disease.
XX
XX Claim 1; Page 203-204; 267pp; English.

XX The invention describes an isolated prostate specific polypeptide (I) and
XX nucleic acid (II) encoding it and are useful for diagnosing and
XX monitoring the presence and metastases of prostate cancer in a patient.
XX (I), (II) and an antibody to (II) are useful in quantitative and
XX qualitative diagnostic assays and methods for detecting, diagnosing,
XX monitoring, treating, staging and predicting cancer in humans having
XX cancer or may have the risk of developing cancer. (I) and (II) are also
XX useful: for determining non-cancerous prostate disease, by measuring
XX their expression levels and/or structural alterations; for determining
XX the sample that has prostate tissue-like characteristics or is a prostate
XX tissue; as an element in an array or a multi-analyte test to recognise
XX expression patterns associated with prostate cancer and other prostate
XX related disorders; and as elements in a computer program for pattern
XX recognition of prostate disorders. (I) and (II) are useful for producing

CC engineered prostate tissue for treatment and research. (II) is useful for
CC producing transgenic animals and cells and also in gene therapy. This
CC sequence represents a prostate specific nucleic acid described in the
CC invention

XX
XX Novel G protein coupled receptor especially olfactory receptor
PT polypeptides and nucleic acids for diagnosing and treating
PT atherosclerosis, cardiomyopathy and diabetes.

```

XX Claim 8; Page 43; 309pp; English.
PS
XX
CC The invention describes an isolated G protein coupled receptor X (GPCR1-
CC 12) polypeptide, especially an olfactory receptor. GPCRX polypeptides are
CC useful for identifying an agent that binds to the polypeptide and for
CC identifying a candidate substance or ligand molecules interacting with an
CC olfactory receptor polypeptide. The polypeptide, (I) and (II) are also
CC useful for treating diseases and disorders related to cell signal
CC processing and metabolic pathway modulation e.g. cardiomyopathy,
CC atherosclerosis and diabetes, and developmental diseases, immune
CC diseases, taste and scent detectability disorders, Burkitt's lymphoma,
CC corticosterogenic disease, signal transduction pathway disorders,
CC metabolic pathway disorders, retinal diseases, metabolic disorders,
CC obesity, infectious disease, pain, cancer, Parkinson's disease, acute
CC heart failure, urinary retention, osteoporosis, Crohn's disease, ulcers,
CC allergies, neurological disorders, genetic disorders, transplantation,
CC fertility, Pancreatitis, Hyperthyroidism and Endometriosis. GPCRX
CC sequences are also useful for identifying a cell or tissue type in a
CC biological sample, to amplify DNA sequences from very small biological
CC samples such as tissues e.g. hair or skin or body fluids in forensic
CC biology. Cells comprising (I) are useful for producing non-human
CC transgenic animals for studying the function and/or activity of GPCRX
CC protein and for identifying and/or evaluating modulators of GPCRX protein
CC activity. This sequence encodes a novel G-protein coupled receptor
CC described in the invention.

XX Claim 5; Page 171-172; 182pp; English.
XX
XX The present sequence is that of a cDNA clone, denoted Incyte
CC Polynucleotide ID No. 55153201CB1, encoding novel human G-protein coupled
CC receptor GCRC-6. The encoded protein is an olfactory receptor, being 73%
CC identical from residue 1 to 296 to a murine olfactory receptor, and
CC including a 7-transmembrane receptor (rhodopsin family) domain. The
CC invention provides GCRC-1 to -26 polynucleotides (see AB258224-49),
CC polypeptides (see ABP72207-32) and antibodies. These are useful for the
CC diagnosis, treatment or prevention of neural disorders of olfaction, cell
CC proliferative, neurological, cardiovascular, gastrointestinal,
CC autoimmune, inflammatory, and metabolic disorders, and viral infections.
CC They are also used in claimed methods of screening for agonist and
CC antagonist compounds, in treating a disease or condition associated with
CC decreased expression or overexpression of a functional GCRC, in
CC assessing the toxicity of a test compound, in the construction of a
CC microarray and generation of an expression profile, and in the
CC identification of a compound which modulates, mimics and/or blocks an
CC olfactory and/or taste sensation

 XX Nucleic acids encoding human immune/hematopoietic antigen polypeptides;
 PT useful for preventing, diagnosing and/or treating cancers and metastasis.
 XX Disclosure; SEQ ID NO 23289; 3071pp + Sequence Listing; English.
 XX AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
 CC amino acid sequences given in AAK82170 to AAK91921. (I) have cytostatic
 CC activity, and can be used in gene therapy and vaccine production. (I)
 CC proteins and polynucleotides may be used in the prevention, diagnosis and
 CC treatment of diseases associated with inappropriate (I) expression. For
 CC example, they may be used to treat disorders associated with decreased
 CC expression by rectifying mutations or deletions in a patient's genome
 CC that affect the activity of (I) by expressing inactive proteins or to
 CC supplement the patients own production of (I). Additionally, (I)
 CC polynucleotides may be used to produce the secreted (I), by inserting the
 CC nucleic acids into a host cell and culturing the cell to express the
 CC protein. (I) proteins and polynucleotides may be used to prevent,
 CC diagnose and treat immune/haematopoietic-related diseases, especially
 CC cancers and cancer metastases of haematopoietic-derived cells. AAK4703
 CC to AAK87694 represent human immune/haematopoietic antigen genomic
 CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
 CC represent sequences used in the exemplification of the present invention

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 23291; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AA82170 to AA82191. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patient's own production of (I). Additionally, (I) polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent,

CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAK82169
CC represent sequences used in the exemplification of the present invention

CC nucleic acid-associated proteins (NAAP). The DNA and protein sequences of
CC the invention are useful in diagnosing, preventing and treating
CC diseases/conditions associated with altered expression of NAAP, such as:
CC autoimmune/inflammatory disorders (e.g. AIDS and allergies), infections
CC (e.g. bacterial and viral), metabolic disorders (e.g. obesity),
CC reproductive disorders (e.g. infertility), neurological disorders (e.g.
CC Parkinson's disease and Alzheimer's disease), cardiovascular disorders
CC (e.g. myocardial infarction and hypertension), eye disorders, or cell
CC proliferative diseases (e.g. cancer). The present DNA sequence encodes a
CC human NAAP protein of the invention.

XX Novel 2495 cDNA, useful for treating osteoporosis, neurological diseases,
PT Alzheimer's diseases, Parkinson's diseases, dementia and various cancers.

XX Claim 1; SEQ ID NO 1849; 2449pp; English.

XX The invention relates to 2495 novel polynucleotides (I) and their encoded
CC polypeptides, sequences hybridizing to these nucleotides, sequences
CC encoding partial polypeptides and sequences having 70% or 90% identity to
CC the nucleotide and protein sequences. The nucleotides and polypeptides
CC are useful as diagnostic markers or therapeutic target for the diseases
CC or morbid states. They are also useful for treating osteoporosis,
CC neurological diseases, Alzheimer's diseases, Parkinson's diseases,
CC dementia and various cancers. This sequence corresponds to a nucleotide
XX sequence of the invention.

XX PA (PROT-) PROTEIN DESIGN LABS INC.

XX PI Aziz N, Ginsburg WM, Zlotnik A;

XX WPI; 2004-441208/41.

XX Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.

XX Example 2; SEQ ID NO 7237; 210pp; English.

XX The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytotatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC DNA of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

XX PS Claim 9; Page 144-145; 150pp; English.
XX CC The present sequence is that of Incyte clone 1399169 encoding new human
XX CC protein regulating gene expression PRGE-27 (see AAY58634). The cDNA was
XX CC initially isolated from brain tumour cDNA library BRAITUT08, and the full
XX CC length sequence assembled from overlapping clones from a number of
XX CC libraries. PRGE-27 is expressed in haematopoietic/immune, reproductive
XX CC and gastrointestinal tissues associated with cell proliferative and
XX CC inflammation diseases, disorders or conditions. It is characterized as a
XX CC bromodomain protein. The invention provides PRGE polypeptides (see
XX CC AAY58608-38) and polynucleotides (see AAZ57839-69), expression vectors,
XX CC host cells, antibodies, agonists and antagonists. It also provides
XX CC methods for diagnosing, treating or preventing disorders associated with
XX CC expression of PRGE. Polynucleotides are also used as sources of probes
XX CC and primers for diagnosis and monitoring of disease, also for detecting
XX CC related sequences and in gene mapping

XX PT Biomarkers useful for predicting or determining the response of a mammal
XX PT to a cancer treatment comprising administration of a modulator of cyclin-
XX PT dependent kinase activity.
XX PS Claim 5; SEQ ID NO 504; 141pp; English.
XX CC This invention describes a novel method of predicting or determining
XX CC whether a mammal will respond or is responding to an anti-cancer agent
XX CC that modulates cyclin-dependent kinase (cdk) activity. The method
XX CC comprises measuring the level of one or more biomarkers selected from
XX CC 2774 biomarkers given in the specification (nucleotide sequence SEQ ID
XX CC NO:1246 (Genbank EST W28729) is especially preferred). The method of the
XX CC invention is utilized in a kit for determining or predicting whether
XX CC patient would be susceptible or resistant to treatment by an agent
XX CC modulating cdk activity. The invention also describes a method for
XX CC utilizing individualized genetic profiles for treating diseases and
XX CC disorders based on patient's response and molecular level, specialized
XX CC microarrays comprising the biomarkers described, antibodies directed
XX CC against the biomarkers and a cell culture model to identify biomarkers.
XX CC The cdk modulator is preferably N-5-[(5-(1,1-Dimethylethyl)-2-
XX CC oxazolyl)methyl]thio]-2-thiazolyl-4-piperidine carboxamide, 0.5-L-
XX CC tartaric acid salt. Note: The sequence data for this patent did not form
XX CC part of the printed specification, but was obtained in electronic format
XX CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences. This
XX CC sequence encodes a biomarker used in the method of the invention.

XX CC ABZ73281-ABZ73697 represent cDNAs corresponding to 391 human secreted
CC protein genes, and ABP00947-ABP01363 represent the proteins they encode.
CC CC ABZ73698-ABZ74687 represent human secreted protein genomic fragments. The
CC invention also encompasses antibodies specific for the secreted proteins,
CC the use of the secreted proteins in drug screening and recombinant
CC vectors and host cells comprising a nucleic acid of the invention. The
CC secreted proteins are thought to be involved in biological activities
CC associated with cellular signalling, cellular differentiation, cell
CC migration, prohormone activation and neurotransmitter activity. The
CC secreted proteins, nucleic acids encoding them, antibodies or antibody
CC fragments specific for the secreted proteins, and modulators of protein
CC activity are useful for diagnosing or treating cancers or other

CC	hyperproliferative disorders. Additionally, the secreted proteins and
CC	their nucleic acids may also be used in the treatment of autoimmune
CC	disorders, inflammatory disorders, diseases involving angiogenesis, AIDS
CC	(acquired immunodeficiency syndrome), hepatitis, anaemia, and to promote
CC	wound healing. Nucleic acids of the invention may be used for chromosome
CC	identification, chromosome mapping, in gene therapy, for identifying
CC	individuals from minute biological samples, as hybridisation probes, and
CC	as molecular weight markers. The present sequence represents a human
CC	secreted protein genomic fragment referred to in the disclosure of the
CC	invention

CC This invention relates to the sequence of an isolated nucleic acid
CC molecule comprising at least one base variation from that of a known
CC human cytochrome P450 A1 (CYP450A1), cytochrome P450 A2 (CYP450A2),
CC cytochrome P450 02E1 (CYP45002E1), adrenergic receptor beta1 (ADRB1),
CC aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator
CC (ARNT), cathepsin S (CTSS), cyclooxygenase 2 (COX2), diazepam binding
CC inhibitor (DBI), epoxide hydroxylase 2 (EPHX2), 5-lipoxygenase activating
CC protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl
CC transferase (NNMT), (kallikrein 2) KLK2, nicotinamide -N-methyl
CC sulfoltransferase thermolabile (STM), UDP-glucuronosyl transferase 2B4
CC (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl
CC transferase (UGT2B15), urokinase receptor (uPA), multidrug resistance 1

```

```

(MDR1), lactotransferrin (LTF), multidrug resistance associated protein 3
(MRP3), orphan nuclear receptor (NR1I2), or acetylcholine muscarinic
receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence.
The polymorphisms in the human genes cited in the invention are useful as
genetic linkage markers for locating and characterizing the genes that
are responsible for specific traits within the genome and eventually
identifying the genes responsible for a variety of disorder-related
traits as a result of their e.g., overexpression, constitutive
expression, mutation or underexpression, which may be used in diagnosing
and/or treating the disorders. The nucleic acid molecules comprising the
polymorphic sequences contained in CYP450A1, CYP450A2, CYP4502E1,
ARNT, EPHX2, GST12, NNMT, NQO2, NR1I2, STM, UGT2B4, UGT2B7, UGT2B15, AHR,
MDR1 and/or MDR3 are useful for screening individuals for altered drug
metabolism. The polymorphic sequences contained in CYP450A1, CYP450A2,
AHR, MDR1 and/or MDR3 may also be used to screen individuals for
susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are
used to screen for altered cardiovascular function, in COX2 for altered
susceptibility to colorectal tumours, in DBI or CHMR1 for altered central
nervous system function, in FLAP and NNMT for altered pulmonary,
immunological or haematological function, in KLK2 for altered serine
protease activity in the prostate, in LTF for altered immunological or
haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and
peripheral nervous system function. The present sequence represents a
polymorphic DNA sequence of the invention

XX Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.
XX Claim 1; SEQ ID NO 268; Opp; English.
XX The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of

CC carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent

XX New use of irinotecan for preparation of compositions for treating cancer in subject having genome with variant allele comprising cytochrome p450, subfamily IIIA, polypeptide 5 polynucleotide, termed CYP3A5.
XX Disclosure; SEQ ID NO 681; 86pp; English.
XX The present invention describes the use of irinotecan (I) or its derivative for the preparation of a pharmaceutical composition for treating colorectal, cervical, gastric, lung, ovarian or pancreatic cancer, or malignant glioma in a subject having a genome with a variant allele which comprises a cytochrome p450, subfamily IIIA (nifedipine oxidase), polypeptide 5 (CYP3A5) polynucleotide (II). (I) and (II) have cytostatic activity. The therapeutic applications of (I) is improved, since it is possible to individually treat a subject with an appropriate dosage and/or an appropriate derivative of (I). Therefore, undesirable, harmful or toxic effects are efficiently avoided. Unnecessary and potentially harmful treatment of those subjects who do not respond to the treatment with substances (nonresponders), as well as the development of drug resistances due to suboptimal drug dosing can be avoided. ACF62200 to ACF62751 and ABM34912 to ABM35013 represent sequences used in the exemplification of the present invention

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)

Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in Riken. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by Michela Fagiolini and Takao K. Henschi (Laboratory for Neuronal Circuit Development Brain Science Institute RIKEN 2-1 Hiroawa, Wako-shi, Saitama 351-0198 Japan) whose assistance we gratefully acknowledge.
Please visit our web site (<http://genome.gsc.riken.go.jp>) for further details.

                Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
                1996. Denatured mRNA was size fractionated on a 1% agarose
                gel. First strand cDNA synthesis was primed with an
                oligo-dT primer containing a Not I site. Double stranded
                cDNA was size selected according to mRNA size fraction.
                ligated with EcoR I adaptor, digested with Not I, and then
                cloned directionally into pyx-Asc vector. The library tag
                sequence located between the Not I site and the polyA
                tail, is GTCGCTGGAA. This library was created for the
                University of Iowa Mouse Brain Molecular Anatomy Project
                (BMAP). 'Gene Discovery in the Developing Mouse Nervous
                System', supported by National Institutes of Mental Health
                (NIMH), Hemin Chin, Ph.D., program coordinator."

 Total RNA was extracted from freeze dried leaf tissue
 Stage I, using a standard Phenol chloroform extraction
 method. Poly(A)+mRNA was isolated from total RNA using the
 PolyAtract mRNA Isolation system III (Promega). The
 library was prepared using the Invitrogen Life
 Technologies, Superscript Plasmid System with gateway
 technology for cDNA Synthesis and cloning. Complementary
 DNA was synthesized from mRNA using an anchored Poly (dT)
 sequence with a NotI restriction site. Sal I linker
 adapters were ligated to the blunt ended cDNA fragments
 followed by restriction with NotI. The cDNA fragments were
 directionally cloned into the NotI-SalI restriction site
 of the pSPORT 1 vector. The ligated cDNA fragments were
 transformed into E. coli ElectroMax DH10B host cells.
 Transformation efficiency: 8.5E+07 Average insert Size by
 PCR: 1100 bp"

 Total RNA was extracted from freeze dried leaf tissue
 Stage I, using a standard Phenol chloroform extraction
 method. Poly(A)+mRNA was isolated from total RNA using the
 PolyAtract mRNA Isolation system III (Promega). The
 library was prepared using the Invitrogen Life
 Technologies, Superscript Plasmid System with gateway
 technology for cDNA Synthesis and cloning. Complementary
 DNA was synthesized from mRNA using an anchored Poly (dT)
 sequence with a NotI restriction site. Sal I linker
 adapters were ligated to the blunt ended cDNA fragments
 followed by restriction with NotI. The cDNA fragments were
 directionally cloned into the NotI-SalI restriction site
 of the pSPORT 1 vector. The ligated cDNA fragments were
 transformed into E. coli ElectroMax DH10B host cells.
 Transformation efficiency: 8.5E+07 Average insert Size by

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence similarities were identified using Powerblast by Jinghui Zhang.

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

Direct Submission
Submitted (29-JAN-2005) Human Genome Sequencing Center, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Jan 28, 2005 this sequence version replaced gi:57334844.
Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.

The repeat regions shown were identified using RepeatMasker by Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui Zhang.

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

 During sequence assembly data is compared from overlapping clones.
 Where differences are found these are annotated as variations
 together with a note of the overlapping clone name. Note that the
 variation annotation may not be found in the sequence submission
 corresponding to the overlapping clone, as we submit sequences with
 only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all
 regions were either double-stranded or sequenced with an alternate
 chemistry or covered by high quality data (i.e., phred quality >=
 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by at least
 one plasmid subclone or more than one M13 subclone; and the
 assembly was confirmed by restriction digest, except on the rare
 occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession
 numbers given in the feature table with their source databases:
 En:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
 on the WORMPEP database can be found at

http://www.sanger.ac.uk/Projects/C_elegans/wormpep/IMPORTANT: This
 sequence is not the entire insert of clone XX-15E1 It may be
 shorter because we sequence overlapping sections only once, except
 for a short overlap.

The true left end of clone RP1-75N14 is at 55991 in this sequence.
 The true right end of clone XX-166H1 is at 1098 in this sequence.

NOTE: This is a 'working draft' sequence. It currently
 consists of 34 contigs. The true order of the pieces
 is not known and their order in this sequence record is
 arbitrary. Gaps between the contigs are represented as
 runs of N, but the exact sizes of the gaps are unknown.
 This record will be updated with the finished sequence
 as soon as it is available and the accession number will
 be preserved.

NOTICE:

This sequence was finished as follows unless otherwise noted:
 all regions were double stranded, sequenced with an alternate
 chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such
 as compressions and repeats; all regions were covered by at least
 one plasmid subclone, fosmid clone or direct clone walk sequence.
 Sequence from the Mouse Genome Sequencing Consortium whole genome
 shotgun may have been used to obtain the consensus sequence; and
 the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren,
 Department of Genetics, Washington University, St. Louis MO. For
 additional information about the map position of this sequence, see
 http://genome.wustl.edu

SOURCE INFORMATION:

The RPCi-24 BAC Library has been constructed by Pieter de Jong and
 coworkers (http://www.chori.org) from male C57BL/6J mouse spleen
 and/or brain genomic DNA. The clone and detailed information can be
 obtained from Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

Primer A: No sequence submitted

Primer B: No sequence submitted

STS size: 601

Protocol:

WGS-discovery (WGS):

Paired-end and low-coverage whole genome shotgun reads were generated from 9 breeds (German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador Retriever, English Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese Water Dog -100,000 each) and five other canids (Chinese, Alaskan, Indian and Spanish Gray Wolf as well as the Californian Coyote).

The WGS reads were placed uniquely on the CanFam1.0 boxer assembly and SNP detection was carried out by SSAHA-SNP. 863872 reads were annotated as STSS and 45941 SNPs were annotated with alleles from the boxer and the breed or canid from which the particular read came. The validation rate for these SNPs was estimated at approximately 98%.

WGA-discovery (WGA) of Boxer/Poodle SNPs: A second set of SNPs was generated using a similar methodology from the 1.5x poodle assembly (Kirkness 2003) were used instead of WGS reads. Since this sequence lacked base quality scores, arbitrary quality scores of phred 40 were assigned before the poodle sequence was placed uniquely on the CanFam1.0 boxer assembly and SNP detection was carried out by SSAHA-SNP. 1637780 SNPs were annotated with alleles from the boxer and the poodle. The validation rate for these SNPs was estimated at approximately TBD%.

Internal-WGA-discovery (I-WGA): A third set of SNPs were discovered by comparing reads in the WGA assembly. SNPs were defined as mismatch positions that had a base quality of ≥ 30 on both reads in a region that aligned without gaps, and with at most one additional mismatch in the ten flanking bases. For each allele, at least one additional read had to confirm it. 731476 SNPs were annotated with alleles between the two boxer alleles. The validation rate for these SNPs was estimated at approximately TBD%.

Center clone name: 64_K_4
-----
* NOTE: This record contains 71 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.
*
* 1       709: contig of 709 bp in length
*
* 810     809: gap of 100 bp
*
* 1521    1521: contig of 712 bp in length
*
* 1622    1621: gap of 100 bp
*
* 2345    2345: contig of 724 bp in length
*
* 2446    2445: gap of 100 bp
*
* 3149    3149: contig of 704 bp in length
*
* 3249    3249: gap of 100 bp
*
* 3954    3954: contig of 705 bp in length
*
* 3955    4054: gap of 100 bp
*
* 4055    4768: contig of 714 bp in length
*
* 4769    4868: gap of 100 bp
*
* 4869    5577: contig of 709 bp in length
*
* 5578    5677: gap of 100 bp
*
*
* 5678    6391: contig of 714 bp in length
*
* 6392    6491: gap of 100 bp
*
* 6492    7198: contig of 707 bp in length
*
* 7199    7298: gap of 100 bp
*
* 7299    8014: contig of 716 bp in length
*
* 8015    8115: gap of 100 bp
*
* 8115    8832: contig of 718 bp in length
*
* 8833    8932: gap of 100 bp

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
 Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at
<http://www.sanger.ac.uk/projects/C-elegans/wormpep> This sequence was generated from part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 Mapping Group. Further information can be found at
<http://www.sanger.ac.uk/HGP/Chr10>
 RP11-269L3 is from the library RP11-11.1 constructed by the group of Pieter de Jong. For further details see
<http://www.chori.org/bacpac/home.htm>
 VECTOR: pBACe3.6

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

 Contact: nisc.zoo@nhgri.nih.gov
 ----- Project Information
 Center project name: gnt
 Center clone name: 371122

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig, has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is generally based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

----- Summary Statistics

Sequencing vector: plasmid; n/a; 100% of reads
 Chemistry: Dye-terminator Big Dye; 100% of reads
 Assembly program: Phrap; version 0.990319
 Consensus quality: 133035 bases at least Q40
 Consensus quality: 133354 bases at least Q30
 Consensus quality: 133486 bases at least Q20
 Insert size: 152000; agarose-ep
 Insert size: 133531; sum-of-contigs
 Quality coverage: 10.18x in Q20 bases; agarose-ep
 Quality coverage: 11.59x in Q20 bases; sum-of-contigs

----- NOTE: This is a 'working draft' sequence. It currently
 * consists of 8 contigs. Gaps between the contigs
 * are represented as runs of N. The order of the pieces
 * is believed to be correct as given, however the sizes
 * of the gaps between them are based on estimates that have
 * provided by the submittor.
 * This sequence will be replaced
 * by the finished sequence as soon as it is available and
 * the accession number will be preserved.

Direct Submission
Submitted (09-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 9, 2003 this sequence version replaced gi:24818682.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Center project name: C_PT031L17

NOTICE:

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren,

Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:

The RPCI-43 BAC Library has been constructed by Chung-Li Shu. DNA was isolated from white blood cells obtained from a male chimpanzee (Pan troglodytes, 'Clint', Yerkes #C0471; birthdate: 6-6-80). The clone and detailed information can be obtained from ResGen (<http://www.resgen.com>) or Pieter de Jong and co-workers at <http://www.bacpac.chori.org>.

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone. This clone is overlapped by AC140950.

Consensus quality: 164740 bases at least Q20

* NOTE: This is a 'working draft' sequence. It currently
* consists of 17 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

1 1251: contig of 1251 bp in length
* 1252 1351: gap of unknown length
* 1352 3283: contig of 1932 bp in length
* 3284 3383: gap of unknown length
* 3384 4641: contig of 1258 bp in length

COMMENT

University, 4444 Forest Park Avenue, St. Louis, Missouri 63108, USA
----- Genome Center
Center: Washington University Genome Sequencing Center
Center code: WUGSC
Web site: <http://genome.wustl.edu>
Contact: submissions@wustl.edu
----- Summary Statistics
Center project name: C_PT058122

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:
all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:
The RPCI-43 BAC Library has been constructed by Chung-Li Shu. DNA was isolated from white blood cells obtained from a male chimpanzee (Pan troglodytes, 'Clint', Yerkes #C0471; birthdate: 6-6-80). The clone and detailed information can be obtained from ResGen (<http://www.resgen.com>) or Pieter de Jong and co-workers at <http://www.bacpac.chori.org>.

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

----- Project Information
Center project name: BM311G21
----- Summary Statistics
Assembly program: XGAP4; version 4.5
Chemistry: Dye-terminator; 100% of reads
Consensus quality: 226307 bases at least Q40
Consensus quality: 227941 bases at least Q30
Consensus quality: 229053 bases at least Q20
Insert size: 230969; sum-of-contigs
Insert size: 243194; 4.0% error; agarose-fp
Quality coverage: 4.52x in Q20 bases; sum-of-contigs Quality coverage: 4.41x in Q20 bases; agarose-fp

* NOTE: This is a 'working draft' sequence. It currently consists of 16 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. * This record will be updated with the finished sequence * as soon as it is available and the accession number will be preserved.

1 2300: contig of 2300 bp in length
2301 2400: gap of 100 bp
2401 20064: contig of 17664 bp in length
20065 20164: gap of 100 bp
20165 32528: contig of 12364 bp in length
32529 32529: gap of 100 bp
32530 50388: contig of 17760 bp in length
50389 50389: gap of 100 bp
50390 56605: contig of 6117 bp in length
56606 56705: gap of 100 bp
56706 72035: contig of 15330 bp in length
72036 72135: gap of 100 bp
72136 114525: contig of 42390 bp in length
114526 114625: gap of 100 bp
114626 126383: contig of 11758 bp in length
126384 126483: gap of 100 bp
126484 142084: contig of 15601 bp in length
142085 142184: gap of 100 bp
142185 152571: contig of 10387 bp in length
152572 152671: gap of 100 bp
152672 155785: contig of 3114 bp in length
155786 155885: gap of 100 bp
155886 170998: contig of 15113 bp in length
170999 171098: gap of 100 bp
171099 175427: contig of 4329 bp in length
175428 175527: gap of 100 bp
175528 203780: contig of 28253 bp in length
203781 203880: gap of 100 bp
203881 206442: contig of 2562 bp in length
206443 206542: gap of 100 bp
206543 232469: contig of 25927 bp in length.

Ehrhartoideae; Oryzeae; Oryza.

1 Sasaki, T., Matsumoto, T. and Yamamoto, K.
Oryza sativa nipponbare (GA3) genomic DNA, chromosome 6, BAC
clone:OSUNBa0062J02

Published Only in Database (2001)
2 (bases 1 to 151636)
Sasaki, T., Matsumoto, T. and Yamamoto, K.

Submitted (18-APR-2001) Takuji Sasaki, National Institute of
Agrobiological Sciences, Rice Genome Research Program, Kannondai
2-1-2, Tsukuba, Ibaraki 305-8602, Japan
(E-mail:tsasaki@nias.affrc.go.jp, URL:http://rgp.dna.affrc.go.jp/,
Tel:81-298-38-7441, Fax:81-298-38-7468)

On Aug 24, 2004 this sequence version replaced gi:46849600.
Genes were predicted from the integrated results of the following:
GENSCAN (http://CCR-081.mit.edu/GENSCAN.html), FGENESH

(http://www.softberry.com/), GeneMark.hmm
(http://opal.biology.gatech.edu/GeneMark/), Glimmer-M
(http://www.tigr.org/tdb/glimmer/glmr_form.html), RiceHMM

(http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor
(http://bioinformatics.iastate.edu/cgi-bin/sp.cgi), sim4
(http://globin.cse.psu.edu/html/docs/sim4.html), gap2

(http://www.tigr.org/software/glimmer/), BLASTN and BLASTX. The
genomic sequence was searched against NCBI Nonredundant Protein
database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA
sequence database at RGP or DBJ. Protein homologues of the coding
regions were searched against NCBI Nonredundant Protein database
with BLASTP. ESTs represent the identified cDNA sequences using
BLASTN with the corresponding DBJ accession no. and RGP clone ID.
Full-length cDNAs represent the identified cDNA sequences using
BLASTN with the corresponding DBJ accession no.

A gene with identity or significant homology to a protein is
classified based on the protein name to indicate the homology level
such as same name, 'putative-' and '-like protein'. A gene without
significant homology to any protein but with full-length cDNA or
EST homology (covering almost the entire length of partial
sequence) is classified as an 'unknown' protein. A gene predicted
by two or more gene prediction programs is classified as a
'hypothetical' protein according to INSP standard. A gene
predicted by a single gene prediction program is also classified as
a probable 'hypothetical' protein and is included as a
miscellaneous feature of the sequence.

The orientation of the sequence is from M13rev to -21M13 of the BAC
clone. This sequence of OSUNBa0062J02 clone has an overlap with
OJ1226_A12 (DBJ: AP004008) clone at 5' end and with P0453H04

(DBJ: AP005453) at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at <http://xrp.dna.affrc.go.jp/GenomeSeq.html>.

Genes were predicted from the integrated results of the following:
GENSCAN (http://CCR-081.mit.edu/GENSCAN.html), FGENESH
(http://www.softberry.com/), GeneMark hmh
(http://opal.biology.gatech.edu/GeneMark/), GlimmerM
(http://www.tigr.org/tdb/glimmer/glmr_form.html), RiceHMM
(http://rgp.dna.affrc.go.jp/RiceHMM/), SplicePredictor
(http://bioinformatics.tastate.edu/cgi-bin/sp.cgi), sim4
(http://globin.cse.psu.edu/html/docs/sim4.html), gap2
(http://www.tigr.org/software/glimmer/), BLASTN and BLASTX. The
genomic sequence was searched against NCBI NonRedundant Protein
database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA
sequence database at RGP or DDBJ. Protein homologs of the coding
regions were searched against NCBI NonRedundant Protein database
with BLASTP. ESTs represent the identified cDNA sequences using
BLASTN with the corresponding DDBJ accession no. and RGP clone ID.
Full-length cDNAs represent the identified cDNA sequences using
BLASTN with the corresponding DDBJ accession no.

A gene with identity or significant homology to a protein is
classified based on the protein name to indicate the homology level
such as same name, 'putative-' and '-like protein'. A gene without
significant homology to any protein but with full-length cDNA or
EST homology (covering almost the entire length of partial
sequence) is classified as an 'unknown' protein. A gene predicted
by two or more gene prediction programs is classified as a
'hypothetical' protein according to IRGSP standard. A gene
predicted by a single gene prediction program is also classified as a
probable 'hypothetical' protein and is included as a
miscellaneous feature of the sequence.
The orientation of the sequence is from 3p6 to T7 of the PAC clone.
This sequence of P0453H04 clone has an overlap with OSUNBA0062J02
(DDBJ: AP003517) clone at 5' end and with OSUNBA0085J13 (DDBJ:
AP003565) at 3' end. Detailed information on overlap and assembly
quality together with annotation of this entry is available at
http://rgp.dna.affrc.go.jp/genomeSeq.html.

1

Sasaki,T., Matsumoto,T. and Yamamoto,K.

Oryza sativa nipponbare (G3) genomic DNA, chromosome 7, PAC clone:P0455H11

Published Only in Database (2001)

2 (bases 1 to 101607)

Sasaki,T., Matsumoto,T. and Yamamoto,K.

Direct Submission

Submitted (14-NOV-2001) Takuji Sasaki, National Institute of Agrobiological Sciences, Rice Genome Research Program; Kannondai 2-1-2, Tsukuba, Ibaraki, 305-8602, Japan (E-mail:tsasaki@ias.affrc.go.jp, URL:<http://rgp.dna.affrc.go.jp/>, Tel:81-298-38-7441, Fax:81-298-38-7468)

On May 24, 2002 this sequence version replaced gi:16930119.

Genes were predicted from the integrated results of the following: GENSCAN (<http://CCR-081.mit.edu/GENSCAN.html>), GENESH (<http://www.softberry.com/>), GeneMark.hmm (<http://opal.biology.gatech.edu/GeneMark/>), GlimmerM (<http://opal.tigr.org/tdb/glimmerm/glmr form.html>), RiceHMM (<http://rgp.dna.affrc.go.jp/RiceHMM/>), SplicePredictor (<http://bioinformatics.iascate.edu/cgi-bin/sp.cgi>), sim4 (<http://globin.cse.psu.edu/html/docs/sim4.html>), gap2 (<http://www.tigr.org/software/glimmer/>), BLASTN and BLASTX. The genomic sequence was searched against NCBI NonRedundant Protein database, nr (<ftp://ncbi.nlm.nih.gov/blast/db>) and the cDNA sequence database at RGP or DDBJ. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP. ESTs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no. and RGP clone ID. Full-length cDNAs represent the identified cDNA sequences using BLASTN with the corresponding DDBJ accession no.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with full-length cDNA or EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted by two or more gene prediction programs is classified as a 'hypothetical' protein according to IRGSP standard. A gene predicted by a single gene prediction program is also classified as a probable 'hypothetical' protein and is included as a miscellaneous feature of the sequence.

The orientation of the sequence is from T7 to SP6 of the PAC clone. This orientation of P0455H11 clone has an overlap with P0519E12 clone (DDBJ: AP004339) at 5' end and an overlap with OJ1332.C12 clone (DDBJ: AP003752) at 3' end. Detailed information on overlap and assembly quality together with annotation of this entry is available at <http://rgp.dna.affrc.go.jp/GenomeSeq.html>.

COMMENT

Sequence Produced by Berkeley PGA

Web site: <http://pga.lbl.gov>

Center Code: PGABERK

Center Project Name: F072

Bac Clone Name: MRC-195B17

This sequence has been compared to sequences of other species

using Vista (<http://www-gsd.lbl.gov/VISTA>). The results can be

viewed at:
http://pga.lbl.gov/cgi-bin/search_cvcgd?type=n&value=FTK7

The order-orientation of the draft sequence was accomplished by using:
Avid (<http://baboon.math.berkeley.edu/mavid>) and paired end information.

Funding agent: Programs for Genomic Applications (NHLBI)

Summary Statistics:

Sequencing vector: Plasmid; pUC18

Chemistry: Dye-terminator Big Dye

Assembly program: Phrap version 0.990329.

* NOTE: This is a 'working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submitter.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* 1 111804: contig of 111804 bp in length.

COMMENT

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: <http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

```

NOTICE:

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone, fosmid clone or direct clone walk sequence. Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to obtain the consensus sequence; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:

The RPCI-24 BAC Library has been constructed by Pieter de Jong and coworkers (<http://www.chori.org>) from male C57BL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

```

The sequence data in this record represents an 'enhanced' version of a Phase 2 submission. Specifically, the indicated order and orientation of each sequence contig has been established using one or more of the following: read-pair data from individual subclones, overlaps with neighboring clones, alignment with available reference sequence (e.g., human), and/or confirmation by PCR testing. In addition, the sequence assembly is based on at least 8X average coverage in Q20 bases and has been reviewed to rule out gross misassemblies, the low-quality ends of sequence contigs have been trimmed away, and each base is associated with a Phrap-derived quality score.

```

----- Summary Statistics
Sequencing vector: plasmid, n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 129301 bases at least Q40
Consensus quality: 129516 bases at least Q30
Consensus quality: 129643 bases at least Q20
Insert size: 129000; agarose-fp
Insert size: 129668; sum-of-contigs
Quality coverage: 10.58x in Q20 bases; agarose-fp

```

Quality coverage: 10.52x in Q20 bases; sum-of-contigs

 * NOTE: This is a 'working draft' sequence. It currently
 * consists of 4 contigs. Gaps between the contigs
 * are represented as runs of N. The order of the pieces
 * is believed to be correct as given, however the sizes
 * of the gaps between them are based on estimates that have
 * provided by the submitter.
 * This sequence will be replaced
 * by the finished sequence as soon as it is available and
 * the accession number will be preserved.
 * 1 6330: contig of 6330 bp in length
 * 6331 6430: gap of unknown length
 * 6431 9836: contig of 3406 bp in length
 * 9837 9936: gap of unknown length
 * 9937 122751: contig of 112815 bp in length
 * 122752 122851: gap of unknown length
 * 122852 122968: contig of 7117 bp in length.

XX (GENE-) GENE LOGIC INC.
XX Beazer-Barclay Y, Weissman SM, Yamaga S, Vockley J;
XX WPI; 2002-435328/46.
XX Detecting granulocyte activation by detecting differential expression of
XX genes associated with granulocyte activation, which serves as diagnostic
XX markers that is useful for monitoring disease states and drug toxicity.
XX Claim 1; SEQ ID NO 134; 114pp; English.
XX The invention relates to detecting (M1) granulocyte (GC) activation
XX (GCA), by detecting the level of expression of gene(s) (Gs) identified by
XX DNA chip analysis as given in the specification, and comparing the
XX expression level to an expression level in an unactivated GC, where
XX differential expression of Gs is indicative of GCA. Also included are
XX modulating (M2) GCA by contacting GC with an agent that alters the
XX expression of at least one gene in Gs; (2) screening (M3) for an agent
XX capable of modulating GCA or an inflammation (especially chronic) in a
XX tissue, an allergic response in a subject, exposure of a subject to a
XX pathogen or sterile inflammatory disease using the gene expression
XX profile; (3) detecting (M4) an inflammation (especially chronic) in a
XX tissue, an allergic response in a subject, exposure of a subject to a
XX pathogen or sterile inflammatory disease, by detecting the level of
XX expression in a sample of the tissue of gene(s) from Gs, where the level
XX of expression of the gene is indicative of inflammation; (4) treating
XX (M5) an inflammation (especially chronic) or in a tissue, an allergic
XX response in a subject, exposure of a subject to a pathogen or sterile
XX inflammatory disease, by contacting a tissue having inflammation with an
XX agent that modulates the expression of gene(s) from Gs in the tissue. M1
XX is useful for detecting GCA; M2 is useful for modulating GCA; M3 is useful
XX for screening an agent capable of modulating GCA preferably in an
XX inflammation in a tissue; M4 is useful for detecting an inflammation
XX (especially chronic) in a tissue, an allergic response in a subject,
XX exposure of a subject to a pathogen or sterile inflammatory disease (e.g.
XX psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis,
XX cardiac reperfusion injury, renal reperfusion injury, ARDS, adult
XX respiratory distress syndrome, inflammatory bowel disease, Crohn's
XX disease, ulcerative colitis, periodontal disease; also bacterial
XX infection, viral infection, parasitic infection, protozoal infection,
XX fungal infection and M5 is useful for treating one of the above
XX conditions. The present sequence represents a gene differentially
XX expressed in granulocytes. Note: The sequence data for this patent did
XX not form part of the printed specification, but was obtained in
XX electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences

XX New isolated cancer-associated polynucleotides and polypeptides useful
XX for diagnosing, preventing or treating cancers, especially lymphoma and
XX leukemia, or in screening for agents that modulate cancer.
XX claim 16; seqid 103; 310pp; English.
XX
XX The invention relates to an isolated nucleic acid comprising at least 10
XX contiguous nucleotides of any of the 233 polynucleotide sequences given
XX in the specification, or its complement. The nucleic acids encode cancer-
```

```
CC associated proteins. Also included are an expression vector comprising
CC the isolated nucleic acid cited above, a host cell comprising the above
CC a recombinant nucleic acid or expression vector, a microarray for detecting
CC a cancer-associated (CA) nucleic acid comprising at least one probe
CC comprising at least 10 contiguous nucleotides of any of the above-
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC an open reading frame of a CA sequence selected from any of the 95
CC polynucleotide sequences as mentioned in the specification, or its
CC complement), an isolated antibody, (or its antigen binding fragment) that
CC binds to the above polypeptide, a hybridoma that produces the above
CC monoclonal antibody, a pharmaceutical composition comprising the above
CC antibody and a pharmaceutical excipient, a kit for detecting cancer
CC cells (comprising the antibody cited above, methods for diagnosing cancer
CC or for detecting the presence or absence of cancer cells in an
CC individual, a method for inhibiting growth of cancer cells in an
CC individual, a method for delivering a therapeutic agent to cancer cells
CC in an individual, an electronic library comprising the above
CC polynucleotide or polypeptide (or their fragments), methods of screening
CC for anticancer activity or for a bioactive agent capable of modulating
CC the activity of a CA protein (CAP), methods for detecting cancer,
CC associated with expression of a polypeptide in a test cell sample, a
CC method for treating cancers and a method for inhibiting the expression of
CC CA gene in a cell. The composition and methods are useful for detecting,
CC diagnosing, preventing and treating cancers, especially lymphoma and
CC leukaemia. These may also be used in screening for agents that modulate
CC cancer. The present sequence is a human CAP genomic sequence. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO

PT Screening for anti-neoplastic agent involves exposing cells to a chemical
PT agent to be tested for anti-neoplastic activity, and determining a change
PT in expression of a gene of a signature gene set.
XX
PS Claim 1; SEQ ID NO 1071; 44pp; English.
XX
CC The present invention describes a method (M1) for screening for an anti-
CC neoplastic agent. The method involves exposing cells to a chemical agent
CC to be tested for anti-neoplastic activity, determining a change in
CC expression of at least one gene (I) of a signature gene set, where (I)
CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664
CC to ABL70110), or is at least 95% identical to (S), where a change in
CC expression is indicative of anti-neoplastic activity. (I) has cytostatic
CC activity and can be used in gene therapy. M1 can be used for screening an
CC anti-neoplastic agent, and can be used for producing a product which is
CC the data collected with respect to the anti-neoplastic agent as a result
CC of M1, and the data is sufficient to convey the chemical structure and/or
CC properties of the agent. M1 can be used in the treatment of cancer such
CC as colon, breast, stomach, lung, thyroid, oesophageal, ovarian, kidney,
CC prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell
CC cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous
CC cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilms'
CC tumour

PT Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.
XX
PS Example 2; SEQ ID NO 4899; 210pp; English.
XX
CC The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytostatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC DNA of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

XX
XX New isolated nucleic acid molecule that encodes a plant protein or its
PT fragment, useful for isolating a variety of agronomically significant
PT genes associated with plant growth, quality or yield, and as molecular
PT tags to map genes.
XX
XX Claim 1; SEQ ID NO 17315; 34pp; English.
XX
XX The invention relates to 17880 cotton expressed sequence tags (ESTs;
CC ACN45220-ACN63099). The ESTs were isolated from cDNA libraries generated
CC from primed or non-primed seeds from variety DP50B, mature seeds from
CC variety Coker 312 Boswell 96 Field, and androecium tissue, gynoceum
CC tissue, developing fibres, carpel walls and septa from variety
CC Nucleon338. The invention also relates to substantially purified
CC proteins or their fragments encoded by nucleic acid molecules of the
CC invention, and to transformed plants having a nucleic acid construct
CC comprising a nucleic acid of the invention. The cotton ESTs are useful as
CC molecular tags to isolate genetic regions, to isolate genes, to map
CC genes, to determine gene function, and to determine whether genes are
CC members of a particular gene family. The nucleic acid molecules may be
CC used for isolating a variety of agronomically significant genes
CC associated with plant growth, quality, yield, and could also serve as
CC links in metabolic and catabolic pathways. The nucleic acid molecules are
CC also useful for identifying genes important in initiating and maintaining
CC seed germination or that may be used to mitigate stresses encountered
CC during seed germination. The ESTs additionally enable the acquisition of
CC promoters and cis-regulatory elements which will be useful to express
CC agronomically significant genes in these tissues and/or other tissues,
CC and also permits the acquisition of molecular markers useful in breeding
CC schemes, genetic and molecular mapping, and in cloning of agronomically
CC significant genes. The nucleic acid molecules are further useful for
CC detecting the expression level or pattern of a protein or mRNA and for
CC detecting the presence or quantity of a protein by tissue printing. The
CC present sequence represents a specifically claimed EST isolated from a
CC cotton variety Nucleon338 developing fibre cDNA library (LIB3830). The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from the US
CC patent office at seqdata.uspto.gov/sequence.html?DocID=US20040123340

XX The invention relates to an isolated nucleic acid comprising at least 10
CC contiguous nucleotides of any of the 233 polynucleotide sequences given
CC in the specification, or its complement. The nucleic acids encode cancer-
CC associated proteins. Also included are an expression vector comprising

CC the isolated nucleic acid cited above, a host cell comprising the above
CC recombinant nucleic acid or expression vector, a microarray for detecting
CC a cancer-associated (CA) nucleic acid comprising at least one probe
CC comprising at least 10 contiguous nucleotides of any of the above-
CC mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC an open reading frame of a CA sequence selected from any of the 95
CC polynucleotide sequences as mentioned in the specification, or its
CC complement), an isolated antibody, (or its antigen binding fragment) that
CC binds to the above polypeptide, a hybridoma that produces the above
CC monoclonal antibody, a pharmaceutical composition comprising the above
CC antibody and a pharmaceutical excipient, a kit for detecting cancer
CC cells (comprising the antibody cited above, methods for diagnosing cancer
CC or for detecting the presence or absence of cancer cells in an
CC individual, a method for inhibiting growth of cancer cells in an
CC individual, a method for delivering a therapeutic agent to cancer cells
CC in an individual, an electronic library comprising the above
CC polynucleotide or polypeptide (or their fragments), methods of screening
CC for anticancer activity or for a bioactive agent capable of modulating
CC the activity of a CA protein (CAP), methods for detecting cancer
CC associated with expression of a polypeptide in a test cell sample, a
CC method for treating cancers and a method for inhibiting the expression of
CC CA gene in a cell. The composition and methods are useful for detecting,
CC diagnosing, preventing and treating cancers, especially lymphoma and
CC leukaemia. These may also be used in screening for agents that modulate
CC cancer. The present sequence is a mouse CAP genomic sequence. Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT New IKKAP genes with mutations, useful for identifying a subject with
PT familial dysautonomia (FD), or for rapid carrier screening in the
PT Ashkenazi Jewish population, e.g. screening presymptomatic homozygotes or
PT prenatal diagnosis.
XX Claim 1; Page; 109pp; English.
XX
CC The present invention relates to methods and compositions useful for
CC detecting mutations which cause Familial Dysautonomia (FD, Riley-Day
CC syndrome, Hereditary Sensory and Autonomic Neuropathy Type III) [OMIM
CC 223900]. It was found that mutations in the IKKAP gene (see AB080565)
CC are associated with FD. The mutation associated with the major haplotype
CC of FD, FDI mutation, is a base pair (bp) mutation, where the thymine
CC nucleotide located at bp 6 of intron 20 in the IKKAP gene is replaced
CC with a cytosine. This results in skipping of exon 20 in the mRNA from FD
CC patients, although they continue to express varying levels of wild-type
CC message in a tissue-specific manner. The mutation associated with the
CC minor haplotype, FD2 mutation, is a bp mutation, where the guanine
CC nucleotide at bp 2397 (bp 73 of exon 19) is replaced with a cytosine.
CC This bp mutation causes an arginine to proline missense mutation
CC in the IKKAP protein, which is predicted to disrupt a potential
CC phosphorylation site. The IKKAP nucleic acid sequences are useful for
CC identifying a subject with FD and for rapid carrier screening. The IKKAP
CC gene contains 37 exons and maps to chromosome 9q31. Note: the present
CC sequence was not shown in the specification, but was derived from the
CC human wild-type IKKAP sequence given in Fig 6

 DR
 XX Identifying a stress condition to which a plant cell has been exposed and
 PT producing plants with increased tolerance to these abiotic stresses.
 XX
 XX Claim 144; SEQ ID NO 3818; 577pp + Sequence Listing; English.
 XX
 XX The invention relates to identifying a stress condition to which a plant
 CC cell has been exposed, comprising: (a) contacting nucleic acid
 CC representative of expressed polynucleotides in the plant cell with an
 CC array or probes representative of the plant cell genome; and (b)
 CC detecting a profile of expressed polynucleotides in the plant cell
 CC characteristic of a stress response. The method is useful in the
 CC production of transgenic plants, cells and seeds and in producing plants
 CC with increased tolerance to abiotic stress. The present sequence is that
 CC of an Arabidopsis thaliana stress regulated gene (AB212196-AB217574) used
 CC in methods of the invention. Note: The sequence data for this patent is
 CC not represented in the printed specification but is based on sequence
 CC information supplied to Derwent by the European Patent Office

 DR
 XX Identifying at least one gene involved in plant resistance or response to

PT pathogenic infection for conferring resistance or tolerance to a plant to
 PT bacterial, fungal or viral infection by determining or detecting plant
 PT gene expression.
 XX Claim 27; SEQ ID NO 2445; 899pp; English.
 XX
 XX The present invention relates to a method (M1) for identifying genes
 CC involved in plant resistance or response to pathogenic infection. M1
 CC comprises identifying a gene whose expression is significantly altered in
 CC the incompatible interaction of plant gene expression relative to
 CC expression of the gene in an uninfected plant, in a mutant plant that
 CC does not express a gene associated with response to pathogenic infection,
 CC or in a corresponding incompatible or compatible interaction. (M1) is
 CC useful for conferring resistance to resistance or tolerance to a plant to
 CC bacterial, fungal or viral infection. The present sequence was used to
 CC illustrate the invention.

XX New human secretory proteins and polynucleotides, useful for diagnosing,
PT treating or preventing autoimmune/inflammatory disorders (e.g. AIDS),
PT neurological disorders (e.g. Alzheimer's), or cell proliferations or
PT cancers.
XX Claim 1; SEQ ID NO 365; 459pp + Sequence Listing; English.
XX
XX The invention relates to a secretory polynucleotide (designated sptm)
CC comprising any of 567 polynucleotide sequences (AB235837-AB236403), a
CC naturally occurring polynucleotide sequence at least 90 % identical to
CC the polynucleotide sequence, a polynucleotide complementary to them or an
CC RNA equivalent of them. The polypeptide or polynucleotide are useful for
CC treating, preventing or diagnosing a disease or condition associated with
CC the expression of functional SPTM. These are particularly useful for
CC diagnosing, treating or preventing autoimmune/inflammatory disorders
CC (e.g. acquired immunodeficiency syndrome, anaemia, asthma or Crohn's
CC disease), neurological disorders (e.g. epilepsy, Huntington's disease,
CC dementia, stroke, Alzheimer's disease, Creutzfeldt-Jakob disease,
CC multiple sclerosis, cerebral palsy, Parkinson's disease, anxiety,
CC schizophrenia or amnesia), or cell proliferative disorders (e.g.
CC psoriasis, polycythemia vera, or cancers including adenocarcinoma,
CC leukaemia, lymphoma, melanoma, myeloma, sarcoma or cancers of the brain,
CC breast, cervix or prostate). Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in electronic
CC format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
XX Early detection of soft tissue sarcoma comprises determining expression
PT of a gene in a first soft tissue sample and a normal soft tissue sample
PT and comparing the gene expression, also useful in treating soft tissue
PT sarcoma.
XX
XX Example 2; SEQ ID NO 6853; 210pp; English.
XX
XX The invention relates to a novel method for detecting soft tissue sarcoma
CC which comprises obtaining a first soft tissue sample from an individual
CC and a normal soft tissue sample from the same or different individual,
CC determining the expression of a gene in both samples and comparing the
CC expression of the gene in both soft tissue samples, where a higher level
CC of protein expression in the first soft tissue sample indicates the
CC presence of soft tissue sarcoma. The method of the invention has
CC cytostatic applications and may be useful for detecting soft tissue
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC acid sequences may be useful in diagnostic and screening applications.
CC The current sequence is that of a human soft tissue sarcoma-upregulated
CC DNA of the invention. The current sequence is not shown within the
CC specification per se but was submitted in CD format by the inventor.

XX      New isolated polynucleotides, which are differentially expressed in colon
PT      cancer cell, useful for treating cancer, e.g. colon cancer, breast
PT      cancer, or pancreatic cancer.
XX      Claim 1; SEQ ID NO 3035; 97pp; English.
XX      PS
XX      CC The invention relates to 9672 polynucleotides (ACLS3866-ACLS3537) which
XX      are differentially expressed in colon cancer cells. The invention also
XX      relates to vectors and host cells comprising a differentially expressed
XX      polynucleotide of the invention; a method for detecting a cancerous cell
XX      by detection of a gene product of the polynucleotides; a method for
XX      inhibiting a cancerous phenotype of a cell by inhibiting a gene product
XX      of the polynucleotides; a method of treating an individual with cancer by
XX      administration of a modulator of a gene product of the polynucleotides;
XX      and an isolated antibody that specifically binds to a polypeptide encoded
XX      by one of the 9672 polynucleotides. The polynucleotides, polypeptides,
XX      antibodies, and methods are useful for the detection of cancerous cells;
XX      for the diagnosis, prognosis and management of cancer; for the
XX      identification of agents that modulate the phenotype of cancerous cells;
XX      for the identification of therapeutic targets for cancer chemotherapy;
XX      and for the treatment of cancer, especially colon cancer and metastasized
XX      colon cancer, but also breast or pancreatic cancer. The polynucleotides
XX      are also useful as a source of probes or primers for use in diagnostic
XX      methods. The differentially expressed polynucleotides or their encoded
XX      proteins can additionally be used as vaccines to modulate primary immune
XX      responses for the prevention or treatment of cancer. The present sequence
XX      represents a specifically claimed polynucleotide which is differentially
XX      expressed in colon cancer. Note: The sequence data for this patent did
XX      not form part of the printed specification, but was obtained in
XX      electronic format directly from WIPO at
XX      ftp.wipo.int/pub/published_pct_sequences

XX      New nucleic acid associated with lactation, and muscle and fat
PT      deposition, useful for genome mapping, gene identification and analysis,
PT      cattle breeding, or for genetically improving cattle.
XX      Claim 2; SEQ ID NO 835; 245pp; English.
XX      CC The invention relates to a purified nucleic acid molecule associated with
XX      lactation or muscle and fat deposition (designated LMFD), derived from
XX      cattle, and the LMFD nucleic acid can specifically hybridise to a second
XX      nucleic acid molecule comprising any of 15112 nucleotide sequences,
XX      appearing as ABX34836-ABX49947, or complements of them. Also included are
XX      ; (1) a transformed cell having a nucleic acid comprising an LMFD nucleic
XX      acid linked to a promoter and a 3' non- translated sequence that
XX      functions in the cell to cause termination of transcription and addition
XX      of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and
XX      (2) determining a level or pattern of a molecule in a bovine cell or
XX      tissue comprising: (a) incubating a marker nucleic acid (comprising any
XX      of the 15112 nucleic acid sequences or its complement or fragment) with a
XX      complementary nucleic acid molecule obtained from the bovine cell or
XX      tissue, where hybridisation between the marker nucleic acid and the
XX      complementary nucleic acid permits the detection of the molecule; and (b)
XX      detecting the level or pattern of the complementary nucleic acid, where
XX      the detection of the complementary nucleic acid is predictive of the
XX      level or pattern of the molecule. The LMFD nucleic acid is used for
XX      determining a level or pattern of a molecule in a bovine cell or tissue.
XX      It is useful for genome mapping, gene identification and analysis, cattle
XX      breeding, preparation of constructs for use in cattle gene expression, or
XX      for genetically improving cattle. The present sequence is one of the
XX      15112 bovine LMFD EST (expressed sequence tag) nucleic acids. Note: The
XX      present sequence was not shown in the specification but was obtained in
XX      electronic format from the USPTO web site:
XX      seqdata.uspto.gov/sequence.html?DocID=20020137139

PT	cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
PT	pests, for conferring increased resistance to plant disease, or for
PT	improving yield.
XX	
PS	Claim 1; SEQ ID NO 21977; 15pp; English.
XX	
CC	The invention describes a recombinant DNA construct comprising a
CC	polynucleotide consisting of a sequence encoding an amino acid sequence
CC	available in electronic form from the US patent office at
CC	ftp.seqsdata.uspo.gov/sequence.html?docID=2004034888. The polynucleotide
CC	of the invention are also useful in physical arrays of molecules and as
CC	plant breeding markers. The recombinant DNA construct is useful for
CC	improving plant tolerance to cold, heat, drought, herbicides, extreme
CC	osmotic conditions, pathogens or pests, for manipulating growth rate in
CC	plant cells by modification of the cell cycle pathway, for conferring

CC increased resistance to plant disease, for producing galactomannan,
CC lignin or plant growth regulators, for increasing the rate of homologous
CC recombination in plants, for improving yield by modification of
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC or by providing improved plant growth and development under at least one
CC stress condition or for modifying seed oil or protein yield and/or
CC content. This sequence represents a plant full length insert
CC polynucleotide that can be used in the recombinant DNA construct of the
CC invention.

 XX Ruben SM, Barash SC, Birse CE, Rosen CA;
 XX WPI; 2001-235357/24.
 XX P-PSDB; AAG74146.
 XX Nucleic acids encoding 4277 human colon cancer-associated polypeptides,
 XX useful for preventing, diagnosing and/or treating colorectal cancers.
 XX Claim 1; Page 2666; 9803pp; English.
 XX AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon
 XX cancer-associated nucleic acid molecules (N) and proteins (P), where the
 XX proteins are collectively known as colon cancer antigens. The colon
 XX cancer antigens have cytostatic activity and can be used in gene therapy
 XX and vaccine production. N and P may be used in the prevention, diagnosis
 XX and treatment of diseases associated with inappropriate P expression. For
 XX example, N and P may be used to treat disorders associated with decreased
 XX expression by rectifying mutations or deletions in a patient's genome
 XX that affect the activity of P by expressing inactive proteins or to
 XX supplement the patient's own production of P. Additionally, N may be used
 XX to produce the colon cancer-associated Ps, by inserting the nucleic acids
 XX into a host cell and culturing the cell to express the proteins. N and P
 XX can be used in the prevention, diagnosis and treatment of colorectal
 XX carcinomas and cancers. AAH37196 to AAH37204 and AAG77789 represent
 XX sequences used in the exemplification of the present invention. N.B.
 XX Pages 666 to 682 and page 7053 of the sequence listing were missing at
 XX time of publication, meaning no sequences are present for SEQ ID NO:1027

 XX Novel human genes and their expression products which are differentially
 XX expressed in different cell types.
 XX Claim 1; Page 1561; 2479pp; English.
 XX The present invention describes a library of human polynucleotides
 XX comprising the sequences given in AA21532 to AA21779. Also described is
 XX a method of detecting differentially expressed genes correlated with the
 XX cancerous state of a mammalian cell, comprising detecting at least one
 XX differentially expressed gene product in a test sample from a cell
 XX suspected of being cancerous, where the gene product is encoded by one of
 XX the 5248 polynucleotide sequences given in AA21532 to AA21779. The
 XX polynucleotides can be used as a source of primers and probes, which can
 XX be used for a variety of purpose, e.g. detection of expression levels,
 XX mapping, tissue typing or profiling, forensics, genetic analysis and
 XX detection of polymorphisms. Polypeptides encoded by the polynucleotides
 XX can be used for raising antibodies for experimental, diagnostic and
 XX therapeutic purposes. The polynucleotides may also be used to construct
 XX arrays for diagnostics (which may be used to determine function of an
 XX encoded protein); and to detect differences in expression levels between
 XX two cells (e.g. to identify abnormal or diseased tissue in a human, to
 XX identify a genetic predisposition or susceptibility to a disease such as
 XX cancer). The polynucleotides of the invention are especially used in the
 XX diagnosis, prognosis and management of colorectal cancer, breast cancer,
 XX and lung cancer. The polynucleotides can also be used to screen for
 XX peptide analogues and antagonists

PT Novel gene useful for preparing a composition for reducing or inhibiting
PT viral infection or for suppressing a malignant phenotype in a cell.
XX
XX
PS Claim 1; SEQ ID NO 265; 662pp; English.
XX
XX
CC This invention relates to novel mammalian genes involved in viral
CC infection and tumour suppression. Specifically, it refers to methods for
CC identifying cellular genes that are required for viral, bacterial or
CC parasitic growth, as well as genes used for tumour progression, but that
CC are not essential for cell survival. The present invention describes a
CC 'gene trap' method and screening/ selection process that can isolate
CC those polynucleotides that are associated with a specific process of
CC interest. Furthermore, this method relies on the core discovery that
CC virally infected cells become dependent on a serum survival factor that
CC does not affect non-infected cells. Accordingly, identification of these
CC factors and the appropriate inhibitors thereof, provides a means to treat
CC and/ or prevent viral, bacterial or parasitic growth and infection, as
CC well as tumour growth. The compositions of this invention exhibit
CC cytostatic, virucidal, antibacterial and antiparasitic activities. This
CC polynucleotide is a rat cDNA sequence that is necessary for viral
CC infection, given in an exemplification of the invention.

PT cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or
PT pests, for conferring increased resistance to plant disease, or for
PT improving yield.
XX
XX
PS Claim 1; SEQ ID NO 22701; 15pp; English.
XX
XX
CC The invention describes a recombinant DNA construct comprising a
CC polynucleotide consisting of a sequence encoding an amino acid sequence
CC available in electronic form from the US patent office at
CC ftp.segdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide
CC of the invention are also useful in physical arrays of molecules and as
CC plant breeding markers. The recombinant DNA construct is useful for
CC improving plant tolerance to cold, heat, drought, herbicides, extreme
CC osmotic conditions, pathogens or pests, for manipulating growth rate in
CC plant cells by modification of the cell cycle pathway, for conferring
CC increased resistance to plant disease, for producing galactomannan,
CC lignin or plant growth regulators, for increasing the rate of homologous
CC recombination in plants, for improving yield by modification of
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake
CC or by providing improved plant growth and development under at least one
CC stress condition or for modifying seed oil or protein yield and/or
CC content. This sequence represents a plant full length insert
CC polynucleotide that can be used in the recombinant DNA construct of the
CC invention.

XX
XX Claim 88; Page 170-171; 173pp; English.
XX
XX The invention relates to human enzymes designated NZMS and nucleic acid
CC molecules encoding such proteins. Sequences of the invention are useful
CC for diagnosing, treating or preventing disorders associated with aberrant
CC expression of NZMS. The disorders treated include cell proliferative
CC disorders such as hepatitis, psoriasis, cancer (e.g. leukaemia),
CC autoimmune disorders such as diabetes, acquired immune deficiency
CC syndrome (AIDS), cardiovascular disorders such as arteriosclerosis,
CC hypertension), gastrointestinal disorders (e.g. anorexia, gastritis),
CC neurological disorders (e.g. epilepsy, dementia), pulmonary disorders
CC (e.g. emphysema, asthma), reproductive or eye disorders. Polypeptides of
CC the invention is useful in a number of drug screening techniques and to
CC analyse the proteome of a tissue or cell type. They are also useful as
CC elements on a microarray. Polynucleotides of the invention are useful for
CC creating knockin humanised animals or transgenic animals to model human
CC diseases, in somatic or germline gene therapy, to generate a transcript
CC image of a tissue or cell type, for detecting difference in the
CC chromosomal location due to translocation or inversion among normal,
CC carrier or affected individuals and as hybridisation probes for mapping
CC naturally occurring genomic sequences. The present sequence is human NZMS

XX
XX Novel polypeptides useful for diagnosing, treating, preventing and/or
XX prognosing disorders related to the proteins, including cancers, immune
XX disorders and neuronal disorders.
XX
XX Claim 1; SEQ ID NO 161; 880pp; English.
XX
XX The invention relates to novel isolated polypeptides (I), and
XX polynucleotides (II). (I), (II) and the antibody to (I) are useful for
XX diagnosing, preventing and treating diseases including immune system
XX disorders (e.g. congenital and acquired immunodeficiencies, autoimmune
XX disorders (e.g. rheumatoid arthritis), inflammatory conditions, organ
XX transplant rejections and graft versus host disease, infectious diseases
XX (e.g. hepatitis C), bleeding disorders, haemoglobin abnormalities and
XX other blood-related disorders (sickle cell anaemia), myeloproliferative
XX disorders, primary haematopoietic disorders, hyperproliferative disorders
XX (e.g. Gaucher's disease and cancer), neurodegenerative disorders (e.g.
XX Alzheimer's disease, Parkinson's disease), chromosomal abnormalities
XX (Down syndrome), ischaemic injury (e.g. stroke), renal disorders (e.g.
XX glomerulonephritis), cardiovascular disorders (e.g. arrhythmia),
XX respiratory disorders, dermatological disorders (e.g. Addison's
XX epithelial cell proliferation, endocrine disorders, in wound healing,
XX disease), reproductive system disorders, gastrointestinal disorder
XX (inflammatory disorders), liver disorders (cirrhosis), as stimulators of
XX B-cell responsiveness to pathogens, activators of T-cells, to induce
XX higher affinity antibodies, and as a means to induce tumour proliferation
XX in pathologies e.g. acquired immune deficiency syndrome (AIDS). AAS26976-
XX AAS27850 represent novel signal transduction pathway protein coding
XX sequences and PCR primers of the invention

PT New isolated polypeptide useful for diagnosing and treating
PT immunosuppressive conditions such as autoimmune disease and Parkinson's
PT disease.
XX

XX Claim 3; SEQ ID NO 161; 345pp; English.

XX The invention relates to an isolated polypeptide. The polypeptide is
CC useful for diagnosing a pathological condition or a susceptibility to a
CC pathological condition in a subject, by determining the presence or
CC amount of expression of the polypeptide in a biological sample and
CC amount of expression of the polypeptide in a biological sample and
CC diagnosing a pathological condition or a susceptibility to a pathological
CC condition based on the presence or amount of expression of the
CC polypeptide. The polypeptide is also useful for identifying a binding
CC partner to the polypeptide, which involves contacting the polypeptide
CC with a binding partner and determining whether the binding partner
CC effects an activity of the polypeptide. The polypeptide or the nucleic
CC acid encoding the polypeptide is useful for preventing, treating, or
CC ameliorating a medical condition, which involves administering the
CC polypeptide or the nucleic acid to a mammalian subject. The nucleic acid
CC is useful for diagnosing a pathological condition or a susceptibility to
CC a pathological condition in a subject, which involves determining the
CC presence or absence of a mutation in the nucleic acid, and diagnosing a
CC pathological condition or susceptibility to a pathological condition
CC based on the presence or absence of the mutation. The polypeptide, the
CC nucleic acid and an antibody to the polypeptide are useful for treating
CC autoimmune disease, Parkinson's disease, silicosis, gastrointestinal
CC disease, atherosclerosis, haemophilia, thrombocytopenia. The polypeptide,
CC the nucleic acid and the antibody are useful as immunosuppressive agents,
CC as adjuvants to enhance immune responses, and as agents to induce higher
CC affinity antibodies and increase serum immunoglobulin concentrations. The
CC present sequence represents cDNA encoding a novel human protein. Note:
CC The sequence data for this patent did not form part of the printed
CC specification but was obtained in electronic format direct from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20020168711.

XX
XX The invention relates to the human RNA helicase 9 and the encoding
CC polynucleotide with cytostatic, virucidal, immunomodulatory,
CC antiinflammatory and haemostatic activity. The polypeptide and encoded
CC polynucleotide are applicable in diagnosis and treatment of malignant
CC neoplasm, haemopathy, HIV infection, immunological diseases, various
CC inflammations, cancer and nervous system diseases

XX (HUMA-) HUMAN GENOME SCI INC.
XX
XX Rosen CA, Barash SC, Ruben SM;
PI WPI; 2001-541565/60.
XX
XX Nucleic acids encoding 3224 human nervous system antigen polypeptides,
PT useful for preventing, diagnosing and/or treating nervous system cancers
PT and metastases.
XX
XX Disclosure; SEQ ID NO 12800; 1701pp + Sequence Listing; English.
XX
XX The invention relates to novel genes (ABA11004-ABA21534) and proteins
CC (AB414678-AB18001) useful for preventing, treating or ameliorating
CC medical conditions e.g. by protein or gene therapy. The genes are
CC isolated from a range of human tissues disclosed in the specification.
CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in
CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic
CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
CC cardiovascular disorders such as myocardial ischaemias; (d) wound healing
CC ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
CC infectious diseases such as viral, bacterial, fungal and parasitic
CC infections. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX New human transporter proteins and nucleic acid molecules, useful for
PT diagnosing, preventing or treating disorders associated with aberrant
PT expression of the transporter proteins, e.g. tumors, or in
PT pharmacogenomic analysis.
XX
XX Claim 4; SEQ ID NO 1; 330pp; English.
XX The invention relates to a novel isolated protein comprising a fully
CC defined sequence of 892 amino acids given in the specification, an
CC allelic variant or an orthologue of the protein and/or a fragment of the
CC protein. A protein of the invention has cytostatic activity, and may have
CC a use in gene therapy. The protein or nucleic acid molecule encoding it
CC is useful as a model for the development of human therapeutic targets,
CC aids in the identification of therapeutic proteins, serve as targets for
CC the development of human therapeutic agents that modulate transporter
CC activity in cells and tissues that express the transporter, or in
CC pharmacogenomic analysis. The protein may be used in substantial and
CC specific assays, in raising antibodies or in eliciting another immune
CC response, as a reagent in assays designed to quantitatively determine the
CC levels of the protein in biological fluids, and as markers for tissues in
CC which the protein is expressed. The nucleic acid molecules may be used as
CC probes, primers, chemical intermediates and in biological assays. These
CC may also be used in diagnosing, preventing or treating disorders
CC associated with human transporter protein, such as tumours. The present
CC sequence encodes the human transporter protein of the invention.

XX
XX New isolated NOVX polypeptides and polynucleotides, useful for
XX preventing, diagnosing or treating NOVX-associated disorders, e.g.
XX obesity, cancer, Parkinson's disease, infections, immune disorders, or
XX various dyslipidaemias.
XX
XX Example 12; Page 122; 461pp; English.
XX
XX The invention relates to an isolated polypeptide comprising any of the 36
XX 86-1370 residue amino acid sequences, given in the specification, a
XX mature form of them, or a sequence that is at least 95 % identical to, or

CC having one or more conservative amino acid substitutions in one of the 36
CC amino acid sequences. The polypeptides, nucleic acid molecules and
CC antibodies of the invention are useful in the manufacture of a medicament
CC for treating a syndrome associated with a human disease, preferably a
CC NOVX-associated disorder. The nucleic acid molecules, polypeptides and
CC antibodies are useful for treating, preventing or diagnosing diseases
CC such as metabolic disorders, diabetes, obesity, infectious diseases
CC (viral, bacterial, fungal, helminthic, and protozoal), anorexia, cancer-
CC associated cachexia, neurodegenerative disorders, Alzheimer's disease,
CC Parkinson's disease, immune disorders, haematopoietic disorders, cancer
CC and various dyslipidaemias, or metabolic disturbances associated with
CC obesity, metabolic X syndrome, and wasting disorders. The nucleic acids
CC and polypeptides may also be used as targets for the identification of
CC small molecules that modulate or inhibit e.g. neurogenesis, cell
CC differentiation, cell proliferation, haematopoiesis, wound healing and
CC angiogenesis, in gene therapy, in generation of antibodies that bind
CC immunospecifically to NOVX substances for use in therapeutic or
CC diagnostic methods. The nucleic acids are further used as hybridisation
CC probes, in chromosome mapping, tissue typing, preventive medicine, and
CC pharmacogenomics. This polynucleotide represents a NOVX related DNA
XX sequence of the invention

 XX New NOVX polypeptides and nucleic acids, useful for preventing or
 PT treating NOVX-associated disorders, e.g. cancer, diabetes,
 PT atherosclerosis, asthma or AIDS, and in chromosome mapping, tissue typing
 PT or pharmacogenomics.
 XX
 PS Claim 20; SEQ ID NO 27; 322pp; English.
 XX
 CC The invention describes a new polypeptide comprising: any of the 36 fully
 CC defined amino acid sequences (e.g. 860, 919 or 681 amino acids) given in
 CC the specification; a mature form of (a); a sequence that is at least 95%
 CC identical to (a); or a sequence comprising one or more conservative
 CC substitutions in (a). The polypeptide is useful in the manufacture of a
 CC medicament for treating a syndrome associated with a human disease, the
 CC disease selected from a pathology associated with the polypeptide. These
 CC may also be used in diagnosing, treating or preventing NOVX-associated
 CC disorders such as cardiomyopathy, atherosclerosis, hypertension,
 CC scleroderma, obesity, cancer, diabetes, haemophilia, graft-versus-host
 CC disease, AIDS, asthma, Crohn's disease, multiple sclerosis, infections,
 CC anorexia, cancer-associated cachexia, neurodegenerative disorders (e.g.
 CC Alzheimer's disease or Parkinson's disease), haematopoietic disorders,
 CC dyslipidemias and other wasting disorders associated with chronic
 CC diseases. The nucleic acids are also used as hybridisation probes, in
 CC chromosome mapping, tissue typing, preventive medicine, and
 CC pharmacogenomics. The polypeptides are also useful as vaccines. This
 CC sequence encodes a novel human polypeptide of the invention.

 XX
 XX New polynucleotides and polypeptides, useful for developing a diagnostic
 PT marker or medicines for regulation of their expression and activity, or
 PT as targets of gene therapy.
 XX
 PS Claim 1; Page; 222pp; English.
 XX
 CC The invention discloses a polynucleotide comprising a sequence selected
 CC from 1970 fully defined nucleotide sequences which encode novel
 CC polypeptides. Also claimed is a polypeptide encoded by the polynucleotide
 CC or its partial peptide, an antibody binding to the polypeptide or peptide
 CC of the polynucleotide, immunologically assaying the polypeptide or
 CC peptide of the polynucleotide by contacting the polypeptide or peptide
 CC with the antibody of the encoded protein, and observing the binding
 CC between the two, a transformant carrying the polynucleotide in an
 CC expressible manner and an antisense polynucleotide. The oligonucleotide
 CC is useful as a primer for synthesising the polynucleotide, or as a probe
 CC for detecting the polynucleotide. The polynucleotides and encoded
 CC proteins are useful as pharmaceutical agents and many disease-related
 CC genes may be included in them, for developing a diagnostic marker or
 CC medicines for regulation of their expression and activity, or as targets
 CC of gene therapy. The genes are involved in tissue and/or cell
 CC regeneration. Membrane proteins, signal transduction-related proteins,
 CC transcription-related proteins, disease-related proteins and genes
 CC encoding them can be used as indicators for diseases (e.g. osteoporosis,
 CC neurological diseases, cancer, tumours). The cDNA may be used to regulate
 CC the activity or expression of the encoded protein to treat diseases. The
 CC sequence presented is a cDNA of the invention. Note: Some of the sequence
 CC data for this patent is not represented in the printed specification, but
 CC is based on sequence information supplied by the European Patent Office.

XX XX Diagnosing or predicting susceptibility to a prostate neoplastic
PT condition by contacting a specimen from the individual with an ARP15
PT binding agent that selectively binds an ARP15 polypeptide.
XX XX Claim 134; Page 210-214; 227pp; English.
XX CC The invention relates to diagnosing or predicting susceptibility to a
CC prostate neoplastic condition. The method involves (a) contacting a
CC specimen from the individual with an androgen responsive prostate
CC specific (ARP)15 binding agent that selectively binds an ARP15
CC polypeptide; (b) determining a test expression level of ARP15 polypeptide
CC in the specimen; and (c) comparing the test expression level to a non-
CC neoplastic control expression level of ARP15 polypeptide, where an
CC altered test expression level as compared to the control expression level
CC indicates the presence of a prostate neoplastic condition in the
CC individual. The method is useful for diagnosing or predicting
CC susceptibility to a prostate neoplastic condition or for treating or
CC reducing severity of a prostate neoplastic condition. The present
CC sequence represents a human ARP30 polypeptide encoding cDNA

XX XX New substantially pure androgen responsive specific nucleic acid, useful
PT for diagnosing and treating prostate cancer.
XX XX Claim 148; SEQ ID NO 21; 102pp; English.
XX CC The invention relates to human androgen responsive prostate specific
XX CC (ARP) polynucleotides and the polypeptides they encode. The invention
XX CC also relates to a method of diagnosing or predicting susceptibility to a
XX CC prostate neoplastic condition in an individual and a method for treating
XX CC or reducing the severity of a prostate neoplastic condition in an
XX CC individual. The polynucleotides, polypeptides and methods of the
XX CC invention are useful for diagnosing and treating prostate cancer. This
XX CC sequence represents a human ARP polynucleotide of the invention.

NCI CGAP D10 is a cDNA library containing the following
tissue(s): A pool of Lung Focal Fibrosis. The library was
constructed according to Bonaldo, Lennon and Soares,
Genome Research, 6:791-806, 1996. First strand cDNA
synthesis was primed with an oligo-dT primer containing a
Not I site. Double stranded cDNA was ligated to an EcoR I
adaptor, digested with Not I, and cloned directionally
into pT7T3-Pac vector. The oligonucleotide used to prime
the synthesis of first-strand cDNA contains a library tag
sequence that is located between the Not I site and the
(gt)18 tail. The sequence tag for this library is
ATACGCGTC.

Clone Distribution: Clone distribution information can be obtained from Dr. M. Bento Soares, bento-soares@uiowa.edu

The following repetitive elements were found in this cDNA

sequence: 1-25, >POLY A#Simple repeat (matched complement) 321-347,

>AT rich#Low complexity 350-478, >ALU (matched complement)

Seq primer: M13 FORWARD

POLYA=Yes.

modified polylinker; Site 1: EcoR I; Site 2: Not I;
 NCI CGAP.DF0 is a cDNA library containing the following
 tissue(s): Subchondral Bone. The library was constructed
 according to Bonaldo, Lennon and Soares, Genome Research,
 6:791-806, 1996. First strand cDNA synthesis was primed
 with an oligo-dT primer containing a Not I site. Double
 stranded cDNA was ligated to an EcoR I adaptor, digested
 with Not I, and cloned directionally into pTVT3-Pac
 vector. The oligonucleotide used to prime the synthesis of
 first-strand cDNA contains a library tag sequence that is
 located between the Not I site and the (dT)18 tail. The
 sequence tag for this library is GTTAAGCGTC.
 TAG TISSUE=subchondral bone
 TAG_LiB=UI-H-DF0
 TAG_SEQ=GTTAAGCGTC"

The library was characterised by oligonucleotide fingerprinting
(ONFP) to reduce sequencing redundancy. According to the ONFP
procedure, clones that display the same hybridisation matrix with a
battery of 200 8mer oligonucleotides are grouped into clusters. One
clone per ONFP cluster was selected for sequencing. cDNA clones and
filters are distributed via Deutsches Ressourcenzentrum fuer
Genomforschung GmbH (http://www.rzpd.de).

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a
division of Invitrogen.
This sequence belongs to sequence cluster 3595.r
For more information about this cluster, see

```

melanogaster BAC library was prepared by Kazutoyo Oosagawa and Aaron Mammeter in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw 9p, the same strain used for the BDGP's p1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

/sex="female"
/tissue_type="Metasoma + Telson"
/dev_stage="adult"
/clone_lib="Mesobuthus gibbosus adult female tail"
/note="The Mesobuthus gibbosus EST library was prepared by
Benjamin Gantenbein and Marian Thomson, University of
Edinburgh. cDNA from the metasoma and telson of an adult
female was cloned into the vector pDNR-LIB. ESTs were
amplified from each clone by PCR, using primers pDNR.M13F
and pDNR.M13R. The products were cleaned of excess
nucleotides and phosphates, by treatment with SAP/ExoI,
and then sequenced using pDNR.seq primer."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 Center code: WUGSC
 Web site: <http://genome.wustl.edu>
 Contact: submissions@watson.wustl.edu
 ----- Summary Statistics
 Center project name: M_BA0282P01

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see <http://genome.wustl.edu>

SOURCE INFORMATION:

The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa and Minako Tateno in the laboratory of Pieter de Jong (<http://www.chori.org>) from female C57BL/6J mouse kidney and/or brain genomic DNA. The clone and detailed information can be obtained from Research Genetics, Inc. (<http://www.resgen.com>) or Pieter de Jong and coworkers at <http://www.chori.org>

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

The position of this clone was established as part of a collaboration between the Chimpanzee Chromosome Y Mapping Project (Jennifer F. Hughes, Tatyana Pyntikova, Helen Skaletsky, Steve Rozen, and David C. Page at the Whitehead Institute for Biomedical Research, Cambridge MA) and the Washington University Genome Sequencing Center, St. Louis MO.

SOURCE INFORMATION:

The RPCT-43 BAC library has been constructed by Chung-Li Shu. DNA was isolated from white blood cells obtained from a male chimpanzee (Pan troglodytes, 'Clint', Yerkes #C0471; birthdate: 6-6-80). The clone and detailed information can be obtained from ResGen (<http://www.resgen.com>) or Pieter de Jong and co-workers at <http://www.bacpac.chori.org>.

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone.

Hughes, Tatyana Pyntikova, Helen Skaletsky, Steve Rozen, and David C. Page at the Whitehead Institute for Biomedical Research, Cambridge MA) and the Washington University Genome Sequencing Center, St. Louis MO.

SOURCE INFORMATION:

The CHORI-251 Chimpanzee BAC library has been constructed at the Children's Hospital Oakland Research Institute, BACPAC Resources, by Dr. Baoli Zhu. DNA was isolated from white blood cells obtained from a male chimpanzee (Pan troglodytes, 'Clint', Yerkes #C0471; birthdate: 6-6-80). The clone and detailed information can be obtained from Pieter de Jong and co-workers at <http://www.bacpac.chori.org>.

NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone. This clone is overlapped by AC147127 and AC146455.

Center project name: etm
Center clone name: 204N10

The sequence data in this record represents an 'enhanced'
version of a Phase 2 submission. Specifically, the indicated
order and orientation of each sequence contig has been
established using one or more of the following: read-pair
data from individual subclones, overlaps with neighboring
clones, alignment with available reference sequence (e.g.,
human), and/or confirmation by PCR testing. In addition,
the sequence assembly is based on at least 8X average
coverage in Q20 bases and has been reviewed to rule out
gross misassemblies, the low-quality ends of sequence
contigs have been trimmed away, and each base is associated
with a Phrap-derived quality score.
----- Summary Statistics
Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 196374 bases at least Q40
Consensus quality: 196562 bases at least Q30
Consensus quality: 196601 bases at least Q20
Insert size: 185000; agarose-fp
Insert size: 196620; sum-of-contigs
Quality coverage: 10.83x in Q20 bases; agarose-fp
Quality coverage: 10.19x in Q20 bases; sum-of-contigs
-----
* NOTE: This is a 'working draft' sequence. It currently

```

```

* consists of 1 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 196620: contig of 196620 bp in length.

JOURNAL	Submitted (23-JAN-2005) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT	On Jan 23, 2005 this sequence version replaced gi:55058582. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence

may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Project Information
Center project name: FAFR
Center clone name: CH240-4L7
----- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 209512 bases at least Q40
Consensus quality: 211147 bases at least Q30
Consensus quality: 212594 bases at least Q20
Estimated insert size: 211936; sum-of-contigs estimation
Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

*** NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 20 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence.
* as soon as it is available and the accession number will
* be preserved.

TITLE	Direct Submission
JOURNAL	Submitted (30-MAY-2005) Human Genome Sequencing Center, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT	On May 30, 2005 this sequence version replaced gi:62122379. Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation. The repeat regions shown were identified using RepeatMasker by Adrian Smit. Sequence similarities were identified using Powerblast by Jinghui Zhang. Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions. ----- Genome Center Center: Baylor College of Medicine Center code: BCM Web site: http://www.hgsc.bcm.tmc.edu/ Drafting Center Code: WIBR Contact: hgsc-help@bcm.tmc.edu. Center: Genome Center

Center: Institute of Molecular Biotechnology

Center code: IMB

Web site: <http://genome.imb-jena.de/>Contact: gscj-submit@genome.imb-jena.de

Project Information

Center project name: U70-64

Center clone name: RP1-100J12, RP1-P79E4

Consensus quality: 188276 bases at least Q40

Consensus quality: 130662 bases at least Q30

Consensus quality: 190837 bases at least Q20

Quality coverage: 10.52x

This sequence was finished as follows unless otherwise noted: all

regions were double stranded, sequenced with an alternate

chemistry, or covered by high quality data (i.e., phred quality >=

30); an attempt was made to resolve all sequencing problems, such

as compressions and repeats; all regions were covered by at least

one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest.

Neighboring sequence information:

This clone is overlapped by RP5-866H8, RP1-84N21.

            Consensus quality: 960 bases at least Q30
            Consensus quality: 61 bases at least Q20
            -----
            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30);
            an attempt was made to resolve all sequencing problems, such as
            compressions and repeats; all regions were covered by at one
            plasmid
            subclone or more than one M13 subclone;
            and the assembly was confirmed by restriction digest.
            -----
            Source information:
            The RPCI-43 chimpanzee BAC library was prepared from DNA isolated
            from the blood of a single male chimpanzee using published
            protocols (Osoegawa,K. et al. Genomics 52:1-8). The DNA from the
            chimpanzee ('Clint') was obtained from the Yerkes Primate Center in
            Atlanta. The library was prepared by Baoli Zhu, Chung Li Shu,
            Kazutoyo Osoegawa, Evan Eichler & Pieter J de Jong. The library
            characteristics are described at
            http://www.chori.org/bacpac/mchimp43.htm.
            The clone may be obtained from Pieter J. de Jong and coworkers
            (http://www.chori.org/bacpac).
            VECTOR: pBACe3.6

```

The CHORI-251 chimpanzee BAC library was prepared from DNA isolated from the blood of a single male chimpanzee using published protocols (Osoegawa, K. et al. Genomics 52:1-8). The DNA from the chimpanzee ('Cline') was obtained from the Yerkes Primate Center in Atlanta. The library was prepared by Baoji Zhu, Chung Li Shu, Kazutoyo Osoegawa, Evan Bichler & Pieter J de Jong. The library characteristics are described at <http://www.chori.org/bacpac/chimpanzee251.htm>. The clone may be obtained from Pieter J. de Jong and coworkers (<http://www.chori.org/bacpac>).

VECTOR: pTARBAC2.1
The PTB1 chimpanzee BAC library was prepared from DNA isolated from cultured cells established from the blood of a single male chimpanzee.

Clones may be obtained from Asao Fujiyama and co-workers (<http://www.gsc.riken.go.jp>).

VECTOR: pKS145

The PTB22 chimpanzee Fosmid library was prepared from DNA isolated from cultured cells established from the blood of a single male chimpanzee.

Clones may be obtained from Asao Fujiyama and co-workers (<http://www.gsc.riken.go.jp>).

VECTOR: pKS143

Sequence Quality Assessment:

This entry has been annotated with sequence

estimates computed by the Phrap assembly program.

All manually edited bases have been reduced to quality zero.

Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

Neighboring clones: PTB-083K24 (left) and PTB-086M04 (right).

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at

http://www.sanger.ac.uk/Projects/C_elegans/wormpep Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see

http://www.sanger.ac.uk/Projects/D_reio/fishmask.shtml DKEY-32N7 is from a Zebrafish BAC library

JOURNAL

Submitted (30-MAY-2005) Human Genome Sequencing Center, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
 On Jan 29, 2005 this sequence version replaced gi:56676412.
 Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.

COMMENT

The repeat regions shown were identified using RepeatMasker by Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui Zhang.

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

Direct Submission

Submitted (09-AUG-1999) Drosophila Genome Center, Lawrence Berkeley
Laboratory, MS 64-121, Berkeley, CA 94720, USA

On Mar 10, 2001 this sequence version replaced gi:5734689.

Sequence submitted by:

Lawrence Berkeley National Laboratory

Berkeley, CA 94720

This sequence was assembled using end sequences from a whole genome
shotgun and from subclones of this BAC and its neighboring clones.
For further information about this sequence, including its location
and relationship to other sequences, please visit our sequence
archive Web site (<http://www.fruitfly.org/sequence/>) or send email
to bdgp@fruitfly.berkeley.edu.

Direct Submission
Submitted (01-NOV-2004) Human Genome Sequencing Center, Department
Of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
3 (bases 1 to 202907)
Cow Genome Sequencing Consortium.
Direct Submission
Submitted (01-JUN-2005) Human Genome Sequencing Center, Department
Of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Jun 26, 2005 this sequence version replaced gi:58038140.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: <http://www.hgsc.bcm.tmc.edu/>
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: FARP
Center clone name: CH240-207
----- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 199720 bases at least Q40
Consensus quality: 200773 bases at least Q30
Consensus quality: 201499 bases at least Q20
Estimated insert size: 203751; sum-of-contigs estimation
Quality coverage: 7x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 13 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved

* 34144: contig of 34144 bp in length
* 34145
* 34194: gap of 50 bp
* 41485: contig of 7291 bp in length

Center Clone name: 182_G_21

* NOTE: This record contains 76 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for

* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

----- Project Information
Center project name: Humdraft11
Center clone name: CMB9-16D10
----- Summary Statistics
Sequencing vector: PCR products; 100% of reads
Chemistry: Dye-terminator ET-amersham; 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 122741 bases at least Q40
Consensus quality: 131182 bases at least Q30
Consensus quality: 135698 bases at least Q20
Insert size: 138675; sum-of-contigs
Quality coverage: 4.07x in Q20 bases; sum-of-contigs

NOTE: This is a 'working draft' sequence. It currently consists of 31 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Direct Submission

Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,

Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk

Clone requests: clonerequest@sanger.ac.uk

COMMENT

On Jun 13, 2001 this sequence version replaced gi:14270001.
 The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
 Em:, EMBL; Sw:, SWISSPROT; Tr:, TrEMBL; Wp:, WormPEP; Information on the WormPEP database can be found at
http://www.sanger.ac.uk/projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at
<http://www.sanger.ac.uk/HGP/Chr6>
 RP11-418P12 is from the library RPCI-11.2 constructed by the group of Peter de Jong. For further details see
<http://www.chori.org/bacpac/home.htm>
 VECTOR: pBACE3.6

----- Genome Center
 Center: Wellcome Trust Sanger Institute
 Center code: SC
 Web site: <http://www.sanger.ac.uk>
 Contact: vega@sanger.ac.uk

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.
